The Dwarf Novae:

The Dwarf Novae John Stephen Glasby, 1970 **The Dwarf Novae** John Stephen Glasby, 1970 *Cataclysmic Variables and Low-Mass X-Ray Binaries* D.Q. Lamb, J. Patterson, 2012-12-06 Since 1976 a meeting devoted to recent research on cataclysmic variables CV workshop has been held annually somewhere in North America Many of the meetings have been held following a custom older than anyone reading this book in locations with well known recreational potential e.g. Santa Cruz CA Boulder CO We thought hard about this custom while contemplating the possibility of organizing a meeting in Massachusetts in the middle of winter Nobody wants their meeting to go down in history as the smallest and dullest and it surely be the coldest But on occasion meeting organizers have defied custom and scheduled meetings for less than trendy places and gotten away with it Urbana IL and Rochester NY must be reckoned as examples of this Encouraged by the spatial and temporal proximity of the American Astronomical Society meeting Boston January 9-12 we thought we might get away with it again and so came to organize a meeting for January 12-15 1983 in Cambridge MA There was another reason for a meeting at this time and place we loftily proclaimed in early mailings No one doubts that the CVs are closely related to the low mass X-ray binaries LMXBs in which the accreting star is usually or perhaps always more compact than a white dwarf Many of the general characteristics of LMXBs sound pretty familiar to any student of CVs orbital periods in the range 0

X-ray Binaries Walter H. G. Lewin, Walter H. Lewin, Edward P. J. van den Heuvel, Jan van Paradijs, 1997-01-16 X-ray binaries are some of the most varied and perplexing systems known to astronomers The compact object which accretes mass from its companion star may be a white dwarf neutron star or black hole whereas the donor star can be a normal star or a white dwarf The various combinations differ widely in their behaviour and this timely volume provides a unique reference of our knowledge to date of all of them Fifteen specially written chapters by a team of the world's foremost researchers in the field explore all aspects of the X-ray binaries They cover the X-ray ultraviolet optical and radio properties of these violent systems and address key issues such as how were these systems formed and what will be their fate how can we understand X-ray bursts and how the quasi-periodic oscillations what is the connection between millisecond radio pulsars and low mass X-ray binaries and how does the magnetic field of a neutron star decay This long-awaited review provides graduate students and researchers with the standard reference on X-ray binaries for many years to come *Images of the Universe* Carole Stott, 1991-11-21 *Images of the Universe* is a special collection of essays written to celebrate astronomy and the centenary of the British Astronomical Association Colin Ronan opens the book with a fascinating account of the developments over the last hundred years For the first time in history astronomers can detect radiation emanating from the Universe across the entire electromagnetic spectrum Space probes have visited the planets and various missions have beamed back to Earth historically and scientifically important images many of which appear in this book Astronomy is a science where the amateur and the professional interact constructively This book is a testament to this relationship The work of amateurs is presented alongside

that of the professional and in each chapter the future discoveries are anticipated Each planet is explored and beautifully illustrated The stars birth place of the elements are examined Paul Murdin gives an account of the brightest supernova to be seen from earth since 1604 Iain Nicolson explores G2 the single dwarf called the Sun Heather Couper and Nigel Henbest look at the Milky Way the hazy band of light that is the edge on view of our galaxy Malcolm Longair looks beyond our own galaxy into the deep sky Paul Davies gives an account of the first one second of the existence of our expanding Universe How did it all happen Martin Rees the cosmologist speculates on the origin of the Universe

Schmadel, Gert Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user I 1980 some older Volume 27 contains literature published in 1980 and received before August literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English

Cataclysmic Variables and Related Objects: pp.i-xc, 1-342 Margherita Hack, Constanze La Dous, 1993

Scientific and Technical Aerospace Reports, 1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database

The Physical Universe Frank Shu, 1982 THE PHYSICAL UNIVERSE An Introduction to Astronomy by Frank Shu is a classic text that despite its age still offers up concise and exact explanations of concepts in physics from basic thermodynamics and quantum up to solar and galactic physics and on to cosmology The philosophical ruminations on life not only add to this book s depth but also to its basic sense of humanity

Classical Novae Michael F. Bode, 1989-05-10 A comprehensive up to date description of the properties and mechanisms of classical novae and the first such effort in the subject since Payne Gaposchkin s influential but out of date The Galactic Novae Contributors present a balanced mix of observation and theory and discuss information gathered at optical radio infrared ultraviolet and x ray wavelengths Discussion begins with an overview of the general properties of novae then covers the accretion process in nova systems and the physics of the nova outburst Classical novae are then placed in the broader family of cataclysmic variables Final chapter is devoted to data on novae including an atlas
