modeling for a range of situations including binary data sets multiple regression and cointegrated systems In each setting a statistical model is constructed to explain the observed variation in the data with estimation and inference based on the likelihood function Substantive issues are always addressed showing how both statistical and economic assumptions can be tested and empirical results interpreted Important empirical problems such as structural breaks forecasting and model selection are covered and Monte Carlo simulation is explained and applied Econometric Modeling is a self contained introduction for advanced undergraduate or graduate students Throughout data illustrate and motivate the approach and are available for computer based teaching Technical issues from probability theory and statistical theory are introduced only as needed Nevertheless the approach is rigorous emphasizing the coherent formulation estimation and evaluation of econometric models relevant for empirical research
