Web Smart:

The Smart Internet Mark Chignell, James Cordy, Joanna Ng, Yelena Yesha, 2010-10-31 I love the idea of a Smart Internet that lets users improve many parts of their lives pulling together data and services from around the internet. This won't happen with large unwieldy programming requirements; it will happen because we're moving towards integrated simple tasks that users can do on an every day basis. With services available on the cloud with analytics available with data that has meaning to the user and not just to some protocol parser with all of these users at all levels will be able to do a better job. The users may be small and large enterprises, local governments, individuals, etc. All of this means that as the world is becoming more intelligent, instrumented, and more interconnected, we'll be headed towards smarter health care, smarter cities, and smarter lives. Gennaro A. Cuomo, IBM Software Group Vice President and IBM Fellow, WebSphere Chief Technology Officer. Congratulations to the team on the publication of this first volume of the IBM CAS Research book series. This is a significant milestone for IBM CAS Research. This series not only captures the innovations resulting from the collaboration across IBM technical leaders, IBM CAS faculty members, as well as our network of distinguished academic partners, it also lays the foundation for ongoing commercialization of future research initiatives.

Semantic Web for the Working Ontologist Dean Allemang, James Hendler, 2009-04-09 The promise of the Semantic Web to provide a universal medium to exchange data, information, and knowledge has been well publicized. There are many sources too for basic information on the extensions to the WWW that permit content to be expressed in natural language yet used by software agents to easily find, share, and integrate information. Until now, individuals engaged in creating ontologies, formal descriptions of the concepts, terms, and relationships within a given knowledge domain, have had no sources beyond the technical standards documents. *Semantic Web for the Working Ontologist* transforms this information into the practical knowledge that programmers and subject domain experts need. Authors Allemang and Hendler begin with solutions to the basic problems but don't stop there; they demonstrate how to develop your own solutions to problems of increasing complexity and ensure that your skills will keep pace with the continued evolution of the Semantic Web. Provides practical information for all programmers and subject matter experts engaged in modeling data to fit the requirements of the Semantic Web. De-emphasizes algorithms and proofs, focusing instead on real world problems, creative solutions, and highly illustrative examples. Presents detailed, ready-to-apply recipes for use in many specific situations. Shows how to create new recipes from RDF, RDFS, and OWL constructs.
