Structural Pattern Recognition:

    Structural Pattern Recognition T. Pavlidis,2013-12-21   *Pattern Recognition* Robert J. Schalkoff,1992 Explores the heart of pattern recognition concepts methods and applications using statistical syntactic and neural approaches Divided into four sections it clearly demonstrates the similarities and differences among the three approaches The second part deals with the statistical pattern recognition approach starting with a simple example and finishing with unsupervised learning through clustering Section three discusses the syntactic approach and explores such topics as the capabilities of string grammars and parsing higher dimensional representations and graphical approaches Part four presents an excellent overview of the emerging neural approach including an examination of pattern associations and feedforward nets Along with examples each chapter provides the reader with pertinent literature for a more in depth study of specific topics   Syntactic and Structural Pattern Recognition Gabriel Ferrate,Theo Pavlidis,Alberto Sanfeliu,Horst Bunke,2012-12-06 Thirty years ago pattern recognition was dominated by the learning machine concept that one could automate the process of going from the raw data to a classifier The derivation of numerical features from the input image was not considered an important step One could present all possible features to a program which in turn could find which ones would be useful for pattern recognition In spite of significant improvements in statistical inference techniques progress was slow It became clear that feature derivation was a very complex process that could not be automated and that features could be symbolic as well as numerical Furthennore the spatial relationship amongst features might be important It appeared that pattern recognition might resemble language analysis since features could play the role of symbols strung together to form a word This led to the genesis of syntactic pattern recognition pioneered in the middle and late 1960 s by Russel Kirsch Robert Ledley Nararimhan and Allan Shaw However the thorough investigation of the area was left to King Sun Fu and his students who until his untimely death produced most of the significant papers in this area One of these papers syntactic recognition of fingerprints received the distinction of being selected as the best paper published that year in the IEEE Transaction on Computers Therefore syntactic pattern recognition has a long history of active research and has been used in industrial applications

    Syntactic And Structural Pattern Recognition - Theory And Applications Horst Bunke,Alberto Sanfeliu,1990-01-01 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to

unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book **Implementation of a structural pattern recognition system** Bernd Drewes,1975 Ten Lectures on Statistical and Structural Pattern Recognition M.I. Schlesinger,Václav Hlavác,2013-03-09 Preface to the English edition This monograph Ten Lectur es on Statistical and Structural Pattern Recognition uncovers the close relationship between various well known pattern recognition problems that have so far been considered independent These relationships became apparent when formal procedures addressing not only known prob lems but also their generalisations were discovered The generalised problem formulations were analysed mathematically and unified algorithms were found The book unifies of two main streams ill pattern recognition the statisti cal a11d structural ones In addition to this bridging on the uppermost level the book mentions several other unexpected relations within statistical and structural methods The monograph is intended for experts for students as well as for those who want to enter the field of pattern recognition The theory is built up from scratch with almost no assumptions about any prior knowledge of the reader Even when rigorous mathematical language is used we make an effort to keep the text easy to comprehend This approach makes the book suitable for students at the beginning of their scientific career Basic building blocks are explained in a style of an accessible intellectual exercise thus promoting good practice in reading mathematical text The paradoxes beauty and pitfalls of scientific research are shown on examples from pattern recognition Each lecture is amended by a discussion with an inquisitive student that elucidates and deepens the explanation providing additional pointers to computational procedures and deep rooted errors *Structural, Syntactic, and Statistical Pattern Recognition* International Association for Pattern Recognition,2002-07-24 This book constitutes the refereed proceedings of the 9th International Workshop on Structural and Syntctic Pattern Recognition SSPR 2002 and the 4th International Workshop on Statistical Techniques in Pattern Recognition SPR 2002 held jointly in Windsor Ontario Canada in August 2002 The 45 revised full papers and 35 poster papers presented together with three invited papers were carefully reviewed and selected from 116 submissions The papers are organized in topical sections on graphs grammars and languages graphs strings and grammars documents and OCR image shape analysis and application density estimation and distribution models multi classifiers and fusion feature extraction and selection general methodology and image shape analysis and application
