MacGinley,2002-12-24 The second edition of this well known book provides a series of practical design studies of a range of steel structures It is extensively revised and contains numerous worked examples including comparative designs for many structures      **Steel Design 1** H. H. Snijder,H. M. G. M. Steenbergen,2020-07-21 This textbook covers the design and analysis of steel structures for buildings according to EN 1990 Eurocode 0 EN 1991 Eurocode 1 and EN 1993 Eurocode 3 Chapter 1 describes the theory and background of EN 1990 in terms of structural safety reliability and the design values of resistances and actions Chapter 2 deals with actions and deformations described in EN 1991 The permanent loads and variable actions and in particular the imposed loads and the snow loads and wind actions are discussed This chapter also contains three worked examples to determine the actions on a floor in a residential house the actions on a free standing platform canopy at a station and the wind actions on the fa ades of an office building Chapter 3 is about modelling discussing the schematisation of the structural system the joints and the material properties as well as the cross section properties

Chapter 4 deals with the classification of frames and the various analysis methods for unbraced and braced frames Chapter 5 then goes deeper into these analysis methods to determine the force distribution and deformations Chapter 6 deals with the assessment by code checking of parts of the steel structure with EN 1993 1 1 and EN 1993 1 8 At a basic level the assessment of the resistance of cross sections the stability of members under axial forces and the resistance of bolted and welded connections are explained Chapter 7 discusses in an extensive way the assessment by code checking of the resistance of cross sections both for single and combined internal forces The principles of the assessment of the resistance of cross sections according to elastic and plastic theory are also discussed
