Christophe, 1998-08-30 Focuses on fats which have recently been synthesized and which are currently used in diseased states or have potential for clinical nutrition such as partial glycerides, structural lipids, salatrims, and triglycerides with specified fatty acid combinations or enriched in specific fatty foods. Chapters address technological aspects of fat modification, the synthesis of foods with specific nutritional properties, aspects of the metabolism of structural modified lipids, and the effect of fat structure on lipemia and lipoproteinemia. Scottish Crop Research Institute, 2000. **Enzymes in Lipid Modification** Uwe Theo Bornscheuer, 2000-09-13 Enzymatic methods of lipid modification, particularly of fats and oils, have developed rapidly since the 1980s. In parallel to the rapid progress in research, a wide range of applications have emerged, e.g., in the food industry. The book is written by leading experts in the field and reflects the state of the art of enzymatic lipid modification. It provides the reader with guidelines on how to select suitable enzymes and how to apply them efficiently. Applications of lipases and phospholipases, lipoxygenases, and P450 monooxygenases, and the use of whole cell systems in lipid modification are described. Cloning, expression, and mutagenesis, as well as attempts to understand the molecular basis of specificity and stereoselectivity, are outlined. In addition, engineering aspects and the choice of solvent systems are addressed. **The Chemical Engineer**, 2002
