Stable Categories and Structured Ring Spectra Andrew J. Blumberg, Teena Gerhardt, Michael A. Hill, 2022-07-21 A graduate level introduction to the homotopical technology in use at the forefront of modern algebraic topology

Galois Extensions of Structured Ring Spectra/Stably Dualizable Groups John Rognes, 2008 The author introduces the notion of a Galois extension of commutative S algebras E_∞ ring spectra often localized with respect to a fixed homology theory There are numerous examples including some involving Eilenberg Mac Lane spectra of commutative rings real and complex topological K theory Lubin Tate spectra and cochain S algebras He establishes the main theorem of Galois theory in this generality Its proof involves the notions of separable and etale extensions of commutative S algebras and the Goerss Hopkins Miller theory for E_∞ mapping spaces He shows that the global sphere spectrum S is separably closed using Minkowski's discriminant theorem and he estimates the separable closure of its localization with respect to each of the Morava K theories He also defines Hopf Galois extensions of commutative S algebras and studies the complex cobordism spectrum MU as a common integral model for all of the local Lubin Tate Galois extensions The author extends the duality theory for topological groups from the classical theory for compact Lie groups via the topological study by J R Klein and the p complete study for p compact groups by T Bauer to a general duality theory for stably dualizable groups in the E local stable homotopy category for any spectrum E

Homotopical Algebraic Geometry II: Geometric Stacks and Applications Bertrand Toën, Gabriele Vezzosi, 2008 This is the second part of a series of papers called HAG devoted to developing the foundations of homotopical algebraic geometry The authors start by defining and studying generalizations of standard notions of linear algebra in an abstract monoidal model category such as derivations tale and smooth morphisms flat and projective modules etc They then use their theory of stacks over model categories to define a general notion of geometric stack over a base symmetric monoidal model category C and prove that this notion satisfies the expected

Equivariant Stable Homotopy Theory L. Gaunce Jr. Lewis, J. Peter May, Mark Steinberger, 2006-11-14 This book is a foundational piece of work in stable homotopy theory and in the theory of transformation groups. It may be roughly divided into two parts. The first part deals with foundations of equivariant stable homotopy theory. A workable category of CW spectra is developed. The foundations are such that an action of a compact Lie group is considered throughout and spectra allow desuspension by arbitrary representations. But even if the reader forgets about group actions, he will find many details of the theory worked out for the first time. More subtle constructions like smash products, function spectra, change of group isomorphisms, fixed point and orbit spectra are treated. While it is impossible to survey properly the material which is covered in the book, it does boast these general features: i) a thorough and reliable presentation of the foundations of the theory; ii) a large number of basic results, principal applications and fundamental techniques presented for the first time in a coherent theory unifying numerous treatments of special cases in the literature.

Handbook of Homotopy Theory Haynes Miller, 2020-01-23 The Handbook of Homotopy Theory provides a panoramic view of an active area in mathematics that is currently seeing dramatic solutions to long-standing open problems and is proving itself of increasing importance across many other mathematical disciplines. The origins of the subject date back to work of Henri Poincaré and Heinz Hopf in the early 20th century, but it has seen enormous progress in the 21st century. A highlight of this volume is an introduction to and diverse applications of the newly established foundational theory of categories. The coverage is vast, ranging from axiomatic to applied, from foundational to computational, and includes surveys of applications both geometric and algebraic. The contributors are among the most active and creative researchers in the field. The 22 chapters by 31 contributors are designed to address novices as well as established mathematicians interested in learning the state of the art in this field, whose methods are of increasing importance in many other areas.

Topological Quillen Localization and Homotopy Pro-nilpotent Structured Ring Spectra Yu Zhang (Ph. D. in mathematics), 2020 The aim of this paper is two-fold: i) to establish the associated TQ local homotopy theory for algebras over a spectral operad \mathcal{O} as a left Bousfield localization of the usual model structure on \mathcal{O} algebras, which itself is almost never left proper in general; and ii) to show that every homotopy pro-nilpotent structured ring spectrum is TQ local. Here TQ is short for topological Quillen homology, which is weakly equivalent to \mathcal{O} algebra stabilization. As an application, we simultaneously extend the previously known connected and nilpotent TQ Whitehead theorems to a homotopy pro-nilpotent TQ Whitehead theorem. We also compare TQ localization with TQ completion and show that TQ local \mathcal{O} algebras that are TQ good are TQ complete. Finally, we show that every 1-connected \mathcal{O} algebra with a principally refined Postnikov tower is TQ local, provided that \mathcal{O} is 1-connected.

Manifolds and K -Theory Gregory Arone, Brenda Johnson, Pascal Lambrechts, Brian A. Munson, Ismar Volić, 2017-01-24 This volume contains the proceedings of the conference on Manifolds Theory and Related Topics held from June 23-27, 2014 in Dubrovnik, Croatia. The articles contained in this volume are a collection of research papers featuring recent advances in homotopy theory and

their applications to manifolds Topics covered include homotopy and manifold calculus structured spectra and their applications to group theory and the geometry of manifolds This volume is a tribute to the influence of Tom Goodwillie in these fields

Rings, Modules, and Algebras in Stable Homotopy Theory Anthony D. Elmendorf, 1997
This book introduces a new point set level approach to stable homotopy theory that has already had many applications and promises to have a lasting impact on the subject Given the sphere spectrum S the authors construct an associative commutative and unital smash product in a complete and cocomplete category of S modules whose derived category is equivalent to the classical stable homotopy category This construction allows for a simple and algebraically manageable definition of S algebras and commutative S algebras in terms of associative or associative and commutative products $R \wedge SR \rightarrow R$ These notions are essentially equivalent to the earlier notions of A -infty and E -infty ring spectra and the older notions feed naturally into the new framework to provide plentiful examples There is an equally simple definition of R modules in terms of maps $R \wedge SM \rightarrow M$ When R is commutative the category of R modules also has a

An Operad Structure for the Goodwillie Derivatives of the Identity Functor in Structured Ring Spectra Duncan A.

Clark, 2021 The aim of this dissertation is three fold i we construct a natural highly homotopy coherent operad structure on the derivatives of the identity functor on structured ring spectra which can be described as algebras over an operad O in spectra ii we prove that every connected O algebra has a naturally occurring left action of the derivatives of the identity and iii we show that there is a naturally occurring weak equivalence of highly homotopy coherent operads between the derivatives of the identity on O algebras and the operad O Along the way we introduce the notion of N colored operads with levels which by construction provides a precise algebraic framework for working with and comparing highly homotopy coherent operads operads and their algebras We also show that similar techniques may be used to provide a new description of an operad structure for the Goodwillie derivatives of the identity in spaces and describe an explicit comparison map from spaces to algebras over such operad
