J. Ross, F. S. Wong, S. Y. Kung, Air Force Engineering and Services Center (U.S.). Engineering and Services Laboratory, INTELLIGENT SYSTEMS INTEGRATION INC ALBUQUERQUE NM., 1988 Protective structures designed to withstand the effects of conventional nonnuclear munitions are built primarily according to deterministic design procedures Real world variabilities in site characteristics structural attributes like strength and stiffness and weapon delivery characteristics are generally not accounted for in current design schemes This report shows the feasibility of developing a balanced design tool which 1 takes into account the natural random variability of quantitative design parameters 2 provides a

framework for assessing the uncertainty in nonrandom issues such as modeling and boundary conditions assumptions and 3 accommodates flexibility in modeling various structural response physics caused by evolutions in weapons environment This report presents results illustrating the advantages of considering variability in the design process A proposed integrated design system appears feasible which would explicitly show how information from design handbooks research findings and expert knowledge and stochastic method can be collected together in one place Design tools which are capable of considering the influence of natural variability in materials and loads on cost and survivability will have tremendous value to the Air Force in its planning cycles for new hardened facilities and for necessary field modifications to existing structures

Probabilistic Structural Dynamics Yu-Kweng Lin, Guo-Qiang Cai, 1995 This book offers readers a balanced exposition of both the mathematical theory of stochastic processes and the principle of structural mechanics It begins with a comprehensive discussion of linear structures under additive random excitations within the frameworks of spectral analysis evolutionary spectral analysis and the theory of random pulse train This is then followed by a thorough treatment of Markov processes including the justification of the Markov idealization from a physical point of view and the solution techniques when applied to model a nonlinear dynamical system under additive random excitations multiplicative random excitations or both Approximately on half of the book deals with such advanced topics as motion stability of dynamical systems due to multiplicative excitations failures due to the excursion of the system response into unsafe regions and random uncertainties of system parameters and initial conditions The authors have taken special care to keep the development of mathematical principles challenging and yet comprehensive to any reader with a sound background in mechanics The inclusion of many examples in earthquake and wind engineering also makes the book a desirable reference for interested researchers in these areas

Numerical Determination of the Electronic Structure of Atoms, Diatomic and Polyatomic Molecules M. Defranceschi,J. Delhalle,2012-12-06 Quantum mechanical calculations in physics chemistry and biology are widely recognized as useful interpretative and predictive tools Unfortunately they are plagued by unfavorable convergence limitations due to the use of finite linear combinations of basis functions With the current computer technologies there is a possible way out to the situation by solving numerically the corresponding wave equations The present interest and need for numerical determination of electronic structure of atoms diatomic and poly atomic molecules led us to organize a NATO ARW devoted to these questions The aim of the meeting was to provide a review of the state of the art about techniques and applications The organizing committee consisted of Drs G Berthier P Claverie M Defranceschi J Delhalle H J Monkhorst and P Pyykk6 It was a great sorrow for us to be informed in January 88 of the death of Professor P Claverie who supported so enthusiastically the idea of having such a meeting organized The NATO Advanced Research Workshop on Numerical Determination of the Electronic Structure of Atoms Diatomic and Poly atomic Molecules was held at Versailles France from April 17th till April 22th 1988
