Content and Goals of the Course

We will **classify soft matter** with focus on **polymer** materials. Here, we will discuss the influence of the **macromolecular architecture**, the chosen **processing** route and processing conditions, on the resulting materials **properties**. In this context, we will discuss the importance of **morphology**, which is the organization of materials at any length scale. **Morphology is the central link between “structure” and “properties” of soft matter.** Our basic understanding of structure-property relations will be reinforced by introducing **examples** from various application areas, e.g. organic electronics, food and biomedical, followed by case studies and discussion.

The student should attain

- 1) Ability to link macromolecular architecture, processing routes and properties of soft matter;
- 2) Insights on the importance of morphology for the performance of soft matter products; and
- 3) Basic understanding on routes for tuning morphology to achieve desired properties.
