

Analysis of Superposition theorem

Consider the network shown. Applying Kirchhoff's voltage to the loop 1.

$$I_1 R_1 + I_1 R_3 + I_2 R_3 = E_1 \quad \text{Since } I_1 R_1 + I R_3 = E_1 \quad \text{and } I_1 + I_2$$

Therefore,
$$I_1 = \frac{E_1 - I_2 R_3}{R_1 + R_3} \quad (1)$$

Considering loop 2,

$$I_2 R_2 + I R_3 = E_2 \quad I_2 R_2 + I_1 R_3 + I_2 R_3 = E_2$$

Therefore,
$$I_2 = \frac{E_2 - I_1 R_3}{R_2 + R_3} \quad (2)$$

Network Analysis & Synthesis 2nd Revised Edition Wadhwa C L, *Flow Networks* Michael T. Todinov,2013-01-16
Repairable flow networks are a new area of research which analyzes the repair and flow disruption caused by failures of
components in static flow networks This book addresses a gap in current network research by developing the theory
algorithms and applications related to repairable flow networks and networks with disturbed flows The theoretical results
presented in the book lay the foundations of a new generation of ultra fast algorithms for optimizing the flow in networks
after failures or congestion and the high computational speed creates the powerful possibility of optimal control of very large
and complex networks in real time Furthermore the possibility for re optimizing the network flows in real time increases
significantly the yield from real production networks and reduces to a minimum the flow disruption caused by failures The
potential application of repairable flow networks reaches across many large and complex systems including active power
networks telecommunication networks oil and gas production networks transportation networks water supply networks
emergency evacuation networks and supply networks The book reveals a fundamental flaw in classical algorithms for
maximising the throughput flow in networks published since the creation of the theory of flow networks in 1956 Despite the
years of intensive research the classical algorithms for maximising the throughput flow leave highly undesirable directed
loops of flow in the optimised networks These flow loops are associated with wastage of energy and resources and increased
levels of congestion in the optimised networks Includes theory and practical examples to build a deep understanding of the
issues Written by the leading scholar and researcher in this emerging field Features powerful software tools for analysis
