Topics in Engineering Mathematics Adriaan Herman Pieter van der Burgh, Juriaan Simonis, 1992 Presents a selection of expository papers on various topics in engineering mathematics The papers concern model problems relating to amongst others the automobile and shipping industries transportation networks and wave propagation **Comprehensive Applied Mathematical Modeling in the Natural and Engineering Sciences** David J. Wollkind, Bonni J. Dichone, 2018-05-01 This text demonstrates the process of comprehensive applied mathematical modeling through the introduction of various case studies The case studies are arranged in increasing order of complexity based on the mathematical methods required to analyze the models The development of these methods is also included providing a self contained presentation To reinforce and supplement the material introduced original problem sets are offered involving case studies closely related to the ones presented With this style the text's perspective scope and completeness of the subject matter are considered unique Having grown out of four self contained courses taught by the authors this text will be of use in a two semester sequence for advanced undergraduate and beginning graduate students requiring rudimentary knowledge of advanced calculus and differential equations along with a basic understanding of some simple physical and biological scientific principles

Fox, Robert E. Burks, 2021-05-19 Mathematical modeling is both a skill and an art and must be practiced in order to maintain and enhance the ability to use those skills Though the topics covered in this book are the typical topics of most mathematical modeling

courses this book is best used for individuals or groups who have already taken an introductory mathematical modeling course. *Advanced Mathematical Modeling with Technology* will be of interest to instructors and students offering courses focused on discrete modeling or modeling for decision making. Each chapter begins with a problem to motivate the reader. The problem tells what the issue is or problem that needs to be solved. In each chapter the authors apply the principles of mathematical modeling to that problem and present the steps in obtaining a model. The key focus is the mathematical model and the technology is presented as a method to solve that model or perform sensitivity analysis. We have selected where applicable to the content because of their wide accessibility. The authors utilize technology to build, compute or implement the model and then analyze it. Features: MAPLE, Excel and R to support the mathematical modeling process. Excel templates, macros and programs are available upon request from authors. Maple templates and example solution are also available. Includes coverage of mathematical programming. The power and limitations of simulations is covered. Introduces multi attribute decision making, MADM and game theory for solving problems. The book provides an overview to the decision maker of the wide range of applications of quantitative approaches to aid in the decision making process and present a framework for decision making. *Mathematics Applied to Engineering, Modelling, and Social Issues* Frank T. Smith, Hemen Dutta, John N. Mordeson, 2019-03-14. This book presents several aspects of research on mathematics that have significant applications in engineering, modelling and social matters, discussing a number of current and future social issues and problems in which mathematical tools can be beneficial. Each chapter enhances our understanding of the research problems in a particular area of study and highlights the latest advances made in that area. The self-contained contributions make the results and problems discussed accessible to readers and provides references to enable those interested to follow subsequent studies in still developing fields. Presenting real world applications, the book is a valuable resource for graduate students, researchers and educators. It appeals to general readers curious about the practical applications of mathematics in diverse scientific areas and social problems. Modeling Change and Uncertainty William P. Fox, Robert E. Burks, 2022-07-20. Mathematical modeling is a powerful craft that requires practice. The more practice the better one will become in executing the art. The authors wrote this book to develop the craft of mathematical modeling and to foster a desire for lifelong learning habits of mind and develop competent and confident problem solvers and decision makers for the 21st century. This book offers a problem solving approach. The authors introduce a problem to help motivate the learning of a particular mathematical modeling topic. The problem provides the issue or what is needed to solve using an appropriate modeling technique. Then principles are applied to the problem and present the steps in obtaining an appropriate model to solve the problem. Modeling Change and Uncertainty Covers both linear and nonlinear models of discrete dynamical systems. Introduces statistics and probability modeling. Introduces critical statistical concepts to handle univariate and multivariate data. Establishes a foundation in probability modeling. Uses ordinary differential equations (ODEs) to develop a more robust

solution to problems Uses linear programming and machine learning to support decision making Introduces the reality of uncertainty and randomness that is all around us Discusses the use of linear programming to solve common problems in modern industry Discusses the power and limitations of simulations Introduces the methods and formulas used in businesses and financial organizations Introduces valuable techniques using Excel MAPLE and R Mathematical modeling offers a framework for decision makers in all fields This framework consists of four key components the formulation process the solution process interpretation of the solution in the context of the actual problem and sensitivity analysis Modeling Change and Uncertainty will be of interest to mathematics departments offering advanced mathematical modeling courses focused on decision making or discrete mathematical modeling and by undergraduate graduate students and practitioners looking for an opportunity to develop practice and apply the craft of mathematical modeling
