Stochastic Linear Programming Algorithms Janos Mayer, 2022-04-19 A computationally oriented comparison of solution algorithms for two stage and jointly chance constrained stochastic linear programming problems this is the first book to present comparative computational results with several major stochastic programming solution approaches The following methods are considered regularized decomposition stochastic decomposition and successive discrete approximation methods for two stage problems cutting plane methods and a reduced gradient method for jointly chance constrained problems The first part of the book introduces the algorithms including a unified approach to decomposition methods and their regularized counterparts The second part addresses computer implementation of the methods describes a testing environment based on a model management system and presents comparative computational results with the various algorithms Emphasis is on the computational behavior of the algorithms

Stochastic Linear Programming P. Kall, 2012-12-06 Today many economists engineers and mathematicians are familiar with linear programming and are able to apply it This is owing to the following facts during the last 25 years efficient methods have been developed at the same time sufficient computer capacity became available finally in many different fields linear programs have turned out to be appropriate models for solving practical problems However to apply the theory and the methods of linear programming it is required that the data determining a linear program be fixed known numbers This condition is not fulfilled in many practical situations e g when the data are demands technological coefficients available capacities cost rates and so on It may happen that such data are random variables In this case it seems to be common practice to replace these random variables by their mean values and solve the resulting linear program By 1960 various authors had already recognized that this approach is unsound between 1955 and 1960 there were such papers as Linear Programming under Uncertainty Stochastic Linear Programming with Applications to Agricultural Economics Chance Constrained Programming Inequalities for Stochastic Linear Programming Problems and An Approach to Linear Programming under Uncertainty

Stochastic Decomposition Julia L. Hingle, Suvrajeet Sen, 1996-02-29 This book summarizes developments related to a class of methods called Stochastic Decomposition SD algorithms which represent an important shift in the design of optimization algorithms Unlike traditional deterministic algorithms SD combines sampling approaches from the statistical literature with traditional mathematical programming constructs e g decomposition cutting planes etc This marriage of two highly computationally oriented disciplines leads to a line of work that is most definitely driven by computational considerations Furthermore the use of sampled data in SD makes it extremely flexible in its ability to accommodate various representations of uncertainty including situations in which outcomes scenarios can only be generated by an algorithm simulation The authors report computational results with some of the largest stochastic programs arising in applications These results mathematical as well as computational are the tip of the iceberg Further research will uncover extensions of SD to a wider class of problems Audience Researchers in mathematical optimization

some of the recent advances made in solving two stage stochastic linear programming problems of large size and complexity. Decomposition and sampling are two fundamental components of techniques to solve stochastic optimization problems. We describe improvements to the current techniques in both these areas. We studied different ways of using importance sampling techniques in the context of Stochastic programming by varying the choice of approximation functions used in this method. We have concluded that approximating the recourse function by a computationally inexpensive piecewise linear function is highly efficient. This reduced the problem from finding the mean of a computationally expensive functions to finding that of a computationally inexpensive function. Then we implemented various variance reduction techniques to estimate the mean of a piecewise linear function. This method achieved similar variance reductions in orders of magnitude less time than when we directly applied variance reduction techniques directly on the given problem. In solving a stochastic linear program the expected value problem is usually solved before a stochastic solution and also to speed up the algorithm by making use of the information obtained from the solution of the expected value problem. We have devised a new decomposition scheme to improve the convergence of this algorithm.

Encyclopedia of Optimization Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04. The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field. The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced. Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling.

System Modeling and Optimization F. Ceragioli, A. Dontchev, H. Furuta, K. Marti, L. Pandolfi, 2006-06-07. We publish in this volume the plenary talks and a selection of the papers on numerics optimization and their applications presented at the 22nd Conference on System Modeling and Optimization held at the Politecnico di Torino in July 2005. The conference has been organized by the Mathematical Department of the Politecnico di Torino. IFIP is a multinational federation of professional and technical organizations concerned with information processes. It was established in 1959 under the auspices of UNESCO. IFIP still maintains friendly connections with specialized agencies of the UN systems. It consists of Technical Committees. The Seventh Technical Committee established in 1972 was created in 1968 by A V Balakrishnan, J L Lions and G I Marchuk with a joint conference held in Sanremo and Novosibirsk. The present edition of the conference is dedicated to Camillo Possio, killed by a bomb during the last air raid over Torino in the sixtieth anniversary of his death. The

special session On the Possio equation and its special role in aeroelasticity was devoted to his achievements The special session Shape Analysis and optimization commemorates the 100th anniversary of Pompeiu thesis
