The Enigma of Slow Viruses Pawel P.

Liberski, 2012-12-06 Scrapie a naturally occurring neurodegenerative disease of sheep and sometimes goats is a prototypic disease for the whole group of the subacute spongiform virus encephalopathies Kuru was the first human disease of this type to be discovered in 1957 by Gajdusek and Zigas and its discovery opened the whole field in the human biomedical sciences by the very realization of the fact that viruses may induce disease months or even decades after infections and that these slow virus diseases are more compatible with classical degenerations of the nervous system than with inflammatory disorders of the brain More than a quarter of a century since discovery of Kuru and more than half a century following the first transmission of scrapie the very nature of the infectious virus remains unknown This comprehensive review covers all aspects of slow unconventional virus infections known today It includes numerous historical data biochemistry and molecular biology of the prion protein and its gene the role of genetics and mutations within PrP gene spreading and targeting of the virus biochemistry and neurochemistry of the alterations of different neurotransmitter system and neuropathology More than 1000 references are listed and critically analyzed the reader can find references to all experiments and laboratory findings which has ever been done in this field Furthermore the book offers different view on the basic problems as for example the nature of the scrapie agent

Inventing the AIDS Virus Peter H. Duesberg, 1998-05-01 Investigates the political and financial forces that have shaped AIDS research including the growing dissension within scientific ranks the power politics among virologists and other controversial issues

Pathological Neurochemistry Abel Lajtha, 2013-03-14 More than for any other volume of the Handbook of Neurochemistry the chapters in this volume on Pathological Neurochemistry deal with the interface of the laboratory bench with the patient's bedside Most of the chapters reflect the confluence of basic scientists clinical investigators and physicians Considered here are many of the more important disorders that afflict the nerves muscles spinal cord and or brain of mankind throughout the world There are well over 500 such disorders And our understanding of their nature and of measures for effective prevention or treatment depends significantly on application of the biochemical disciplines that characterize neurochemistry Before World War II any attempt to compile a volume on pathological neurochemistry would have been largely descriptive and very rudimentary as such handbooks by Hans Winterstein 1929 Irvine Page 1937 and others demonstrate But thanks to the many major advances in research and technology in the postwar decades we now stand at the threshold of understanding how to manage many of the major neurological disorders and we may expect more such delineations in the immediate decades ahead Neurochemistry defined broadly has played a central role in this extraordinary turn of events progressing from what J L W Thudichum in 1884 called objects of anxious empiricism to his anticipation of the proud exercise of chemical precision
