Smallaperture Radio Directionfinding:

Small-aperture Radio Direction-finding Herndon H. Jenkins,1991 Operating principles Performance definition Direction finding error sources System level descriptions Representative operational small aperture Passive geolocation Subsystem considerations Calibration and test of direction finding systems *An Investigation of Space Diversity Radio Direction Finding* Richard Lee Sydnor,1962 The object of this investigation is to determine how far apart radio direction finders should be placed in order to obtain statistically independent samples and to establish the number of radio direction finders to be included in the ensemble average The conclusions are based upon high frequency radio direction finder bearing data observations obtained from two small aperture radio finders separated by a variable distance Crossed Adcock type direction finders were used and the separation distance was varied from 1 32 to 1 4 mi The data were obtained over a period of approximately one yr during the time when conditions in the ionosphere were normal Author *Illinois Technograph* ,1959 **An Investigation of a Digital Bearing Computer for a Small Aperture Radio Direction Finding System** Hubert Lee Grush,1965 **Scientific and Technical Aerospace Reports** ,1966 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database *Radio Direction-finding and the Resolution of Multicomponent Wave-fields* P. J. D. Gething,1978 **A Summary of Engineering Research** University of Illinois (Urbana-Champaign campus). Engineering Experiment Station,1960 **Direction Finding on Whistlers and Related VLF Signals** Michael Dennis Cousins,Stanford University Stanford Electronics Laboratories,1972 The direction of arrival of whistlers and related VLF signals has been measured by a new technique This technique consists of applying an already existing theory the four parameter method to data collected by a novel measurement procedure Measurements of signals induced in orthogonal loop antennas and a vertical monopole located at a single site provide the necessary data The four parameter theory relates the loop and vertical voltages taking into account both amplitudes and phases so that polarization error may be eliminated The technique can be shown equal or superior in accuracy to any other VLF direction finding scheme in current use such as the standard crossed loops and goniometer technique Author *U.S. Government Research & Development Reports* ,1970 [The Summary of Engineering Research](#) University of Illinois (Urbana-Champaign campus).
