Settlage, Sherry A. Southerland, 2007 *Teaching Science to Every Child* proposes a fresh perspective for teaching school science and draws upon an extensive body of classroom research to meaningfully address the achievement gap in science education. Settlage and Southerland begin from the point of view that science can be thought of as a culture rather than as a fixed body of knowledge. Throughout this book the idea of culture is used to illustrate how teachers can guide all students to be successful in science while still being respectful of students' ethnic heritages and cultural traditions. By combining a cultural view of science with instructional approaches shown to be effective in a variety of settings, the authors provide elementary and middle school teachers with a conceptual framework as well as pedagogical approaches which support the science learning of a diverse array of students.

Teaching Children Science Joseph S. Krajcik, Charlene Czerniak, Carl Berger, 1999 This brand new elementary science methods text uses an innovative applied approach and is authored by three leaders in the field. The text takes a constructivist approach and practices this approach by engaging students in reflective thought and investigations. Project based science engages young learners in exploring authentic important and meaningful questions of real concern to students. Through a dynamic process of investigation and collaboration and using the same processes and technologies that real scientists use, students work in teams to formulate questions, make predictions, design investigations, collect and analyze data, make products, and share ideas. Students learn fundamental science concepts and principles that they apply to their daily lives. Project based science helps all students regardless of culture, race, or gender engage in science learning. The book is packed with numerous examples so that the reader can easily understand points that are made throughout the book. Each chapter has activity boxes with experiments that exemplify the project based approach. The book provides useful tips, charts, diagrams, and tables that illustrate how to get children doing investigations. The text's dynamic teaching methods match all of today's major science education reports including The National Science Education Standards, Project 2061, Science for All Americans, and Benchmarks for Science Literacy.

Alfred E. Friedl, 1986 *Teaching Modern Science* Arthur A. Carin, Robert B. Sund, 1980 *Teaching Children Science* Sally Gregory Kohlstedt, 2010-05-15 In the early twentieth century a curriculum known as nature study flourished in major city school systems, streetcar suburbs, small towns, and even rural one room schools. This object based approach to learning about the natural world marked the first systematic attempt to introduce science into elementary education and it came at a time

when institutions such as zoos botanical gardens natural history museums and national parks were promoting the idea that direct knowledge of nature would benefit an increasingly urban and industrial nation The definitive history of this once pervasive nature study movement TeachingChildren Science emphasizes the scientific pedagogical and social incentives that encouraged primarily women teachers to explore nature in and beyond their classrooms Sally Gregory Kohlstedt brings to vivid life the instructors and reformers who advanced nature study through on campus schools summer programs textbooks and public speaking Within a generation this highly successful hands on approach migrated beyond public schools into summer camps afterschool activities and the scouting movement Although the rich diversity of nature study classes eventually lost ground to increasingly standardized curricula Kohlstedt locates its legacy in the living plants and animals in classrooms and environmental field trips that remain central parts of science education today

Teaching Science to Children Mary D. Iatridis,1986 *The Teaching of Science in Primary Schools* Wynne Harlen OBE,Anne Qualter,2017-08-04 The Teaching of Science in Primary Schools provides essential information for all concerned with primary school education about all aspects of teaching science It pays particular attention to inquiry based teaching and learning because of the more general educational benefits that follow from using this approach These benefits are often expressed in terms of developing general scientific literacy and fostering the ability to learn and the motivation to continue learning This book also aims to help teachers focus on the big or powerful ideas of science rather than teaching a series of unrelated facts This leads children to an understanding of the nature and limitations of scientific activity This fully expanded and updated edition explores The compelling reasons for starting science in the primary school Within school planning in the context of less prescriptive national requirements The value of having in mind the big ideas of science The opportunities for children to learn through greater access to the internet and social networking The expanding sources of materials and guidance now available to teachers on line Greater attention to school and teacher self evaluation as a means of improving provision for children s learning The importance for both teachers and learners of reflecting on the process and content of their activities Other key aspects of teaching such as questioning the importance of discussion and dialogue the formative and summative roles of assessment and strategies for helping children to develop understanding skills positive attitudes and enjoyment of science are preserved So also is the learner centred approach with an emphasis on children learning to take some responsibility for their activities This book is essential reading for all primary school teachers and those on primary education courses
