## **Unnatural Disasters:**

*Unnatural Disasters* Janet N. Abramovitz, 2001 The author lays out detailed recommendations for changing the way we manage disasters and ourselves To the extent possible people and structures should be located out of harm s way When hazards are unavoidable buildings should be made to withstand them The author believes healthy ecosystems should be maintained or restored to provide natural disaster protection

*Acts of God* Ted Steinberg, 2006-07-20 As the waters of the Mississippi River and Lake Pontchartrain began to pour into New Orleans people began asking the big question could any of this have been avoided How much of the damage from Hurricane Katrina was bad luck and how much was poor city planning Steinberg s *Acts of God* is a provocative history of natural disasters in the United States This revised edition features a new chapter analyzing the failed response to Hurricane Katrina a disaster Steinberg warned could happen when the book first was published Focusing on America s worst natural disasters Steinberg argues that it is wrong to see these tragedies as random outbursts of nature s violence or expressions of divine judgment He reveals how the decisions of business leaders and government officials have paved the way for the greater losses of life and property especially among those least able to withstand such blows America s poor elderly and minorities Seeing nature or God as the primary culprit Steinberg explains has helped to hide the fact that some Americans are simply better able to protect themselves from the violence of nature than others In the face of revelations about how the federal government mishandled the Katrina calamity this book is a must read before further wind and water sweep away more lives *Acts of God* is a call to action that needs desperately to be heard

*Natural Hazards, Unnatural Disasters* United Nations, 2010 A combination of case studies data on many scales and application of economic principles this report provides an understanding of the relative roles of the market government intervention and social institutions in determining and improving both the prevention and the response to hazardous occurrences Kenneth J Arrow Nobel Prize in Economics 1972

*The Dynamics of Disaster* Susan W. Kieffer, 2013-10-14 If you are an amateur weather geek disaster wonk or budding student of earth sciences you will want to read this book Seattle Times In 2011 there were fourteen natural calamities that each destroyed over a billion dollars worth of property in the United States alone In 2012 Hurricane Sandy ravaged the East Coast and major earthquakes struck in Italy the Philippines Iran and Afghanistan In the first half of 2013 the awful drumbeat continued a monster supertornado struck Moore Oklahoma a powerful earthquake shook Sichuan China a cyclone ravaged Queensland Australia massive floods inundated Jakarta Indonesia and the largest wildfire ever engulfed a large part of Colorado Despite these events we still behave as if natural disasters are outliers Why else would we continue to build new communities near active volcanoes on tectonically active faults on flood plains and in areas routinely lashed by vicious storms A famous historian once observed that civilization exists by geologic consent subject to change without notice In the pages of this unique book leading geologist Susan W Kieffer provides a primer on most types of natural disasters earthquakes tsunamis volcanoes landslides hurricanes cyclones and

tornadoes By taking us behind the scenes of the underlying geology that causes them she shows why natural disasters are more common than we realize and that their impact on us will increase as our growing population crowds us into ever more vulnerable areas Kieffer describes how natural disasters result from changes in state in a geologic system much as when water turns to steam By understanding what causes these changes of state we can begin to understand the dynamics of natural disasters In the book's concluding chapter Kieffer outlines how we might better prepare for and in some cases prevent future disasters She also calls for the creation of an organization something akin to the Centers for Disease Control and Prevention but focused on pending natural disasters

**Acts of God** Ted Steinberg, 2003-04 With the exception of the 9/11 disaster the top ten most costly catastrophes in U.S. history have all been natural disasters five of them hurricanes and all have occurred since 1989 Why this tremendous plague on our homes In *Acts of God* environmental historian Ted Steinberg explains that much of the death and destruction has been well within the realm of human control Steinberg exposes the fallacy of seeing such calamities as simply random events Beginning with the 1886 Charleston and 1906 San Francisco earthquakes and continuing to the present Steinberg explores the unnatural history of natural calamity the decisions of business leaders and government officials that have paved the way for the greater losses of life and property especially among those least able to withstand such blows America's poor elderly and minorities Seeing nature or God as the primary culprit Steinberg argues has helped to hide the fact that some Americans are better protected from the violence of nature than their counterparts lower down the socioeconomic ladder Sure to provoke discussion *Acts of God* is a call to action that must be heard

**Unnatural Disasters** Angus M. Gunn, 2003-11-30 This reference resource describes both the scientific background the economic social issues that resulted from environmental disasters where human activity was the main cause

**The Economics of Natural and Unnatural Disasters** William S. Kern, 2010 Only recently have economists understood natural and unnatural disasters as economic phenomena to be formally analyzed Given the magnitude of many recent disasters their impact on local regional and national economies and the coverage of their consequences in the popular press it is puzzling that the attention of economists was for so long largely diverted from analysis of these events This book presents a noted group of contributors who stand at the forefront of this increasingly important subdiscipline of economics the economics of disasters The chapters they contribute cover a wide variety of events and delve into the human and economic impacts disasters impose on nations around the world Several themes dominant in this literature are discussed These include the ability of potential disaster victims to accurately assess the risks they face the role of incentives in ensuring that mitigation efforts are undertaken the adequacy of our evaluation of the impact of disasters on economies and discussion of the effectiveness of current government policies toward disaster prevention and relief These will in all likelihood continue to be topics of discussion in the future as well

**Unnatural Disasters** Gonzalo Lizarralde, 2021-08-10 Storms floods fires tsunamis earthquakes tornadoes and other disasters seem not only more frequent but also closer to home

As the world faces this onslaught we have placed our faith in sustainable development which promises that we can survive and even thrive in the face of climate change and other risks Yet while claiming to go green we have instead created new risks continued to degrade nature and failed to halt global warming Unnatural Disasters offers a new perspective on our most pressing environmental and social challenges revealing the gaps between abstract concepts like sustainability resilience and innovation and the real world experiences of people living at risk Gonzalo Lizarralde explains how the causes of disasters are not natural but all too human inequality segregation marginalization colonialism neoliberalism racism and unrestrained capitalism He tells the stories of Latin American migrants Haitian earthquake survivors Canadian climate activists African slum dwellers and other people resisting social and environmental injustices around the world Lizarralde shows that most reconstruction and risk reduction efforts exacerbate social inequalities Some responses do produce meaningful changes but they are rarely the ones powerful leaders have in mind This book reveals how disasters have become both the causes and consequences of today s most urgent challenges and proposes achievable solutions to save a planet at risk emphasizing the power citizens hold to change the current state of affairs

**South America, Central America and the Caribbean 2003** Europa Publications,2002 Introductory surveys cover topics of regional importance individual country chapters include analysis statistics and directory information plus information on regional organizations *Disasters, Preparedness and Mitigation in the Americas* ,2010 Un-natural Disasters Terry Swails,Carolyn S. Wettstone,2008 **Mississippi River Tragedies** Christine A. Klein,Sandra B. Zellmer,2014-02-28 Read a free excerpt here American engineers have done astounding things to bend the Mississippi River to their will forcing one of its tributaries to flow uphill transforming over a thousand miles of roiling currents into a placid staircase of water and wresting the lower half of the river apart from its floodplain American law has aided and abetted these feats But despite our best efforts so called natural disasters continue to strike the Mississippi basin as raging floodwaters decimate waterfront communities and abandoned towns literally crumble into the Gulf of Mexico In some places only the tombstones remain leaning at odd angles as the underlying soil erodes away Mississippi River Tragedies reveals that it is seductively deceptive but horribly misleading to call such catastrophes natural Authors Christine A Klein and Sandra B Zellmer present a sympathetic account of the human dreams pride and foibles that got us to this point weaving together engaging historical narratives and accessible law stories drawn from actual courtroom dramas The authors deftly uncover the larger story of how the law reflects and even amplifies our ambivalent attitude toward nature simultaneously revering wild rivers and places for what they are while working feverishly to change them into something else Despite their sobering revelations the authors final message is one of hope Although the acknowledgement of human responsibility for unnatural disasters can lead to blame guilt and liability it can also prod us to confront the consequences of our actions leading to a liberating sense of possibility and to the knowledge necessary to avoid future disasters
