

STIMULUS CONTROL

DEFINITION

Stimulus control refers to a situation where the presence or absence of a stimulus can control behavior. In other words, the stimulus is in control. Stimulus control is considered to be present when a person or animal responds one way in the presence of the stimulus and another way in its absence.

Drivers observe traffic lights changing colors: red means stop, yellow means slow down, and green means go. Drivers learn to associate each color with the corresponding action to avoid accidents. Over time, the color of the traffic light automatically triggers the appropriate response from the driver.
