Advanced Carbon Footprint:

Handbook of Advanced Performability Engineering Krishna B. Misra,2020-11-16 This book considers all aspects of performability engineering providing a holistic view of the activities associated with a product throughout its entire life cycle of the product as well as the cost of minimizing the environmental impact at each stage while maximizing the performance Building on the editor s previous Handbook of Performability Engineering it explains how performability engineering provides us with a framework to consider both dependability and sustainability in the optimal design of products systems and services and explores the role of performability in energy and waste minimization raw material selection increased production volume and many other areas of engineering and production The book discusses a range of new ideas concepts disciplines and applications in performability including smart manufacturing and Industry 4 0 cyber physical systems and artificial intelligence digital transformation of railways and asset management Given its broad scope it will appeal to researchers academics industrial practitioners and postgraduate students involved in manufacturing engineering and system and product development

Advanced Thermoforming Sven Engelmann,2012-06-19 Introduces the latest innovations in thermoforming materials processes and applications Advanced Thermoforming brings readers fully up to date with the latest standards processes materials and applications in the field From forming to filling to sealing processes the author explains everything that can now be accomplished using the most advanced thermoforming technologies available Moreover readers learn how to fully leverage these technologies in order to design and manufacture products that meet all specifications at minimum cost and maximum efficiency Emphasizing the application of advanced thermoforming for the production of technical parts and packaging the book Guides readers through all facets of development design and machine and mold technology Recommends new technologies that offer higher productivity better quality and lower costs Describes common raw materials used in thermoforming including how specific materials affect the production process Explains the proper handling of semi finished products and formed parts Sets forth the basic principles of extrusion an essential process underlying thermoforming Introduces the latest software techniques to simulate the thermoforming of new products Throughout the book readers learn about the latest innovations in thermoforming from thermoformed automobile body parts to fully automated packaging assembly lines The author offers valuable content from his interviews with leading industrial thermoformers sharing insights and tips from their years of hands on experience with readers With Advanced Thermoforming as their guide polymer and plastics engineering professionals and students can now explore and exploit the full range of possibilities that thermoforming technology offers

research results of scholars from the Third International Conference on Advanced Intelligent Technologies ICAIT 2022 organized by IRNet International Academic Communication Center held during October 28 30 2022 The book covers research work from active researchers who are working on collaboration of industry and various intelligent technologies such as intelligent technologies applicable applied to manufacturing and distribution of industrial products factory automation and business The topics included are all computational intelligence techniques applicable applied to industry intelligent techniques in data science applicable applied to business and management intelligent network systems applicable applied to industrial production intelligent technologies applicable to smart agriculture and intelligent information systems for agriculture

Clean Energy Transition and Load Capacity Factors: Environmental Sustainability Assessment through Advanced Statistical Methods, 2nd edition Zeeshan Fareed, Farrukh Shahzad, Solomon Prince

Nathaniel, 2025-09-11 Both developed and developing countries are concerned about sustainable development and reducing environmental burdens Environmental degradation is the deterioration of environmental quality caused by pollutants in the air as well as other activities and processes such as poor land use and natural disasters Although carbon dioxide emissions and ecological footprint are commonly used by academics to quantify environmental degradation assessing environmental sustainability requires a more complex and comprehensive ecological indicator In this context the load capacity factor allows for a comprehensive assessment of environmental sustainability by considering biocapacity and ecological footprint simultaneously The ratio of per capita biocapacity to per capita ecological footprint is called the load capacity factor This environmental quality indicator allows for environmental assessment from both a supply and demand perspective In this context discussion of the determinants of the load capacity factor is an important Research Topic One way to combat environmental degradation is through the clean energy transition The transition to clean energy can determine the environmental quality and thus load capacity The transition to clean energy is a strategy to combat environmental damage Previous empirical research used traditional environmental metrics carbon emissions and ecological footprint and outdated statistical methods to examine the influence of the energy transition on environmental degradation Their results are contradictory and inconclusive Therefore to uncover a true link between the transition to renewable energy and environmental degradation the current Research Topic requires unique statistical methods In this Research Topic we welcome new discussions that explore the relationship between load capacity factor clean energy transition and other macroeconomic indicators using recent time series and panel data analyses For this Research Topic we are looking for Original Research Review new techniques and methodologies We look forward to receiving unique and creative contributions that focus on but are not limited to the following topics Total renewable energy and load capacity factor Sustainable development goals through load capacity factor Energy transition and load capacity factor Energy poverty and load capacity factor Wind energy and load capacity factor Hydro energy and load capacity factor Geothermal energy and load capacity
