**The World's Greenest Buildings** Jerry Yudelson, 2013-01-17 The World's Greenest Buildings tackles an audacious task. Among the thousands of green buildings out there, which are the best and how do we know? Authors Jerry Yudelson and Ulf Meyer examined hundreds of the highest rated large green buildings from around the world and asked their owners to supply one simple thing: actual performance data to demonstrate their claims to sustainable operations. This pivotal book presents an overview of the rating systems and shows best-in-class building performance in North America, Europe, the Middle East, India, China, Australia, and the Asia Pacific region. Practical examples of best practices for greening both new and existing buildings, a practical reference for how green buildings actually perform at the highest level, one that takes you step by step through many different design solutions, a wealth of exemplary case studies of successful green building projects using actual performance data from which to learn, interviews with architects, engineers, building owners, and developers, and industry experts to provide added insight into the greening process. The green argument has moved a long way forward since the previous edition, and this fully updated book addresses the key issues faced by architect, engineer, and client today. *Green Buildings Pay: Design, Productivity, and Ecology* examines through a range of detailed case studies how different approaches to green design can produce more sustainable patterns of development. These cases are examined from three main perspectives: that of the architect, the client, and the user. Completely revised with all new chapters, cases, sections, and introductory material, the third edition presents over 20 new researched case studies drawn from the UK, Europe, and the USA, written in collaboration with the architects, engineers, clients, and user groups. Examples of office and educational buildings of high sustainable and high architectural quality, an exploration of the architectural innovations that have been driven by environmental thinking, such as the new approaches to the design of building facades, roofs, and atria, cases which demonstrate current practice in the area of energy eco-retrofits of existing buildings, documentation of the benefit impact assessment schemes such as LEED and BREEAM, have had upon client expectations and on design approaches over the past
