Study And Teaching:

How to Study Frank M. McMurry, 2015-06-26 Excerpt from *How to Study And Teaching How to Study* Some seven or eight years ago the question of how to teach children to study happened to be included in a list of topics that I hastily prepared for discussion with one of my classes On my later examination of this problem I was much surprised both at its difficulty and scope and also at the extent to which it had been neglected by teachers Ever since that time the two questions How adults should study and How children should be taught to study have together been my chief hobby The following ideas are partly the result of reading but since there is a meagre quantity of literature bearing on this general theme they are largely the result of observation experiment and discussion with my students Many of the latter will recognize their own contributions in these pages for I have endeavored to preserve and use every good suggestion that came from them and I am glad to acknowledge here my indebtedness to them In addition I must express my thanks for valuable criticisms to my colleague Dr George D Strayer and also to Dr Lida B Earhart whose suggestive monograph on the same general subject has just preceded this publication About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

How to Study and Teaching How to Study Frank M. McMurry, James Zimmerhoff, 2017-08-07 Some seven or eight years ago the question of how to teach children to study happened to be included in a list of topics that I hastily prepared for discussion with one of my classes On my later examination of this problem I was much surprised both at its difficulty and scope and also at the extent to which it had been neglected by teachers Ever since that time the two questions How adults should study and How children should be taught to study have together been my chief hobby The following ideas are partly the result of reading but since there is a meagre quantity of literature bearing on this general theme they are largely the result of observation experiment and discussion with my students Many of the latter will recognize their own contributions in these pages for I have endeavored to preserve and use every good suggestion that came from them and I am glad to acknowledge here my indebtedness to them In addition I must express my thanks for valuable criticisms to my colleague Dr George D Strayer and also to Dr Lida B Earhart whose suggestive monograph on the same general subject has just preceded this publication The Author Part I Present Methods of Study Nature of Study and Its Principal Factors Chapter I Indications That Young People Do Not Learn to Study Properly The SERIOUSNESS OF THE EVIL No doubt every one can recall peculiar methods of study that he or some one else has at some

time followed During my attendance at high school I often studied aloud at home along with several other temporary or permanent members of the family I remember becoming exasperated at times by one of my girl companions She not only read her history aloud but as she read she stopped to repeat each sentence five times with great vigor Although the din interfered with my own work I could not help but admire her endurance for the physical labor of mastering a lesson was certainly equal to that of a good farm hand for the same period of time This way of studying history seemed extremely ridiculous But the method pursued by myself and several others in beginning algebra at about the same time was not greatly superior Our text book contained several long sets of problems which were the terror of the class and scarcely one of which we were able to solve alone We had several friends however who could solve them and by calling upon them for help we obtained the statement for each one All these statements I memorized and in that way I was able to pass off the subject A few years later when a school principal I had a fifteen year old boy in my school who was intolerably lazy His ambition was temporarily aroused however when he bought a new book and began the study of history He happened to be the first one called upon in the first recitation and he started off finely But soon he stopped in the middle of a sentence and sat down When I asked him what was the matter he simply replied that that was as far as he had got Then on glancing at the book I saw that he had been reproducing the text verbatim and the last word that he had uttered was the last word on the first page These few examples suggest the extremes to which young people may go in their methods of study The first instance might illustrate the muscular method of learning history the second the memoriter method of reasoning in mathematics I have never been able to imagine how the boy in the third case went about his task hence I can suggest no name for his method While these methods of study are ridiculous I am not at all sure that they are in a high degree exceptional

Why do students stumble over certain concepts and ideas such as attributing causality to correlation revert to former misconceptions even after successfully completing a course such as physics students continuing to believe an object tossed straight into the air continues to have a force propelling it upward or get confused about terminology such as conflating negative reinforcement with punishment This is the first book about lesson study for higher education Based on the idea that the best setting in which to examine teaching is where it takes place on a daily basis the lecture hall seminar room studio lab and the online classroom management system lesson study involves several instructors jointly designing teaching studying and refining an individual class lesson in order to explore student learning problems observe how students learn and analyze how their instruction affects student learning and thinking The primary purpose is to help teachers better understand how to support student learning and thinking By observing how students learn through lesson study teachers can improve their own teaching and build knowledge that can be used by other teachers to improve their practice Lesson study grew out of the collective efforts of classroom teachers in Asia most notably in Japan to improve their teaching Subsequently imported tested and implemented by a group of instructors of biology economics English and psychology at the University of Wisconsin La Crosse the process proved so valuable that the university has since established the College Lesson Study Project of which the author of this book is Director Focusing on a single lesson enables participants to examine in detail every step of the teaching process from vision and goals to instructional design to implementation to observation and analysis of student performance and then evidence based improvement It enables faculty to explore learning problems that matter most to them learn alternative ways to teach from one another and co design new course materials This book introduces lesson study practices to college teachers providing the necessary guidance tools examples models and ideas to enable teachers to undertake lesson study in their own classes It also explores the underlying rationale for lesson study practices and how to realize the full potential of lesson study to advance teaching and learning A Joint Publication with the National Teaching and Learning Forum An ACPA NASPA Joint Publication **Teaching, Learning and Study Skills** Tom Burns, Sandra Sinfield, 2004-09-17
