## **Solving Higherorder Equations From Logic To Programming:**

**Solving Higher-Order Equations** Christian Prehofer,2012-12-06 This monograph develops techniques for equational reasoning in higher order logic Due to its expressiveness higher order logic is used for specification and verification of hardware software and mathematics In these applications higher order logic provides the necessary level of abstraction for concise and natural formulations The main assets of higher order logic are quantification over functions or predicates and its abstraction mechanism These allow one to represent quantification in formulas and other variable binding constructs In this book we focus on equational logic as a fundamental and natural concept in computer science and mathematics We present calculi for equational reasoning modulo higher order equations presented as rewrite rules This is followed by a systematic development from general equational reasoning towards effective calculi for declarative programming in higher order logic and A calculus This aims at integrating and generalizing declarative programming models such as functional and logic programming In these two prominent declarative computation models we can view a program as a logical theory and a computation as a deduction

**Constraints in Computational Logics: Theory and Applications** Hubert Comon, Claude Marche, Ralf Treinen, 2003-08-06 Constraints provide a declarative way of representing infinite sets of data They are well suited for combining different logical or programming paradigms as has been known for constraint logic programming since the 1980s and more recently for functional programming The use of constraints in automated deduction is more recent and has proved to be very successful moving the control from the meta level to the constraints which are now first class objects This monograph like book presents six thoroughly reviewed and revised lectures given by leading researchers at the summer school organized by the ESPRIT CCL Working Group in Gif sur Yvette France in September 1999 The book offers coherently written chapters on constraints and constraint solving constraint solving on terms combining constraint solving constraints and theorem proving functional and constraint logic programming and building industrial applications *Foundations of Software Technology and Theoretical Computer Science* Vijay Chandru, 1996-11-27 This book constitutes the refereed proceedings of the 16th International Conference on Foundations of Software Technology and Theoretical Computer Science FST also included are four invited contributions The papers are organized in topical sections on computational geometry process algebras program semantics algorithms rewriting and equational temporal logics complexity theory and type theory Algebraic Methodology and Software Technology, 1995 **Functional and Logic Programming**, 2001 **Rewriting Techniques and Applications**, 2000 **Foundations of Software Technology and Theoretical Computer Science**, 1993 Principles and Practice of Declarative Programming, 2004 Constraints in Computational Logics, 1999 **Symposium on Logic Programming**, 1987 **Computer Aided Systems Theory**, 2001 *Mathematical Reviews*, 2002 Explicit Substitutions and All That Mauricio Ayala-Rincón, 2000 Abstract Explicit substitution calculi are extensions of the lambda calculus where the substitution mechanism is internalized into the theory This feature makes them suitable for implementation and theoretical study of logic based tools such as strongly typed programming languages and proof assistant systems In this paper we explore new developments on two of the most successful styles of explicit substitution calculi the lambda sigma and lambda s subscript e calculi **American Book Publishing Record**, 1997-09
