

Teaching Strategies for Students with Learning Disabilities in Mathematics

Rarely is there a single cause for a learning disability. Often there is a constellation of causes operating together that result in a child's learning difficulties. Mathematics is a complex process requiring visual and cognitive perception abilities, comprehension ability, and adequate prior knowledge. This article addresses students' learning difficulties in mathematics and provides some suggested activities that have been proven to work with students with learning disabilities.

Learning Disabled (LD) is the largest category of special education. LD is a general term that refers to a heterogeneous group of disorders manifested by significant difficulties in the acquisition and use of listening, speaking, reading, writing, reasoning, or mathematical abilities, especially in academic settings.

More than one half of all students in the public education system who are eligible for special education services are learning disabled (Geary, 1999). Since 1976, the number of students identified with LD has more than doubled; there are 3 boys for every 1 girl challenged by LD (Garten, 1998). The National Council of Teachers of Mathematics (NCTM, 2000) specifically identified "Equity" as their first principle for school mathematics. They feel educators need to have high expectations and strong support for all students and that accommodating differences to help everyone learn mathematics is critical. The NCTM has taken a prominent stand that as educators we must take an "equity for all students" approach to teaching mathematics. All students, including special needs or even second language learners, have the right to learn math and feel confident in their ability to do math (Furner, Yahya, and Duffy, 2005). Teachers must see to it that "mathematics can and will be learned by all students" (NCTM, 2000, p. 13).

Math learning difficulties are common, significant, and worthy of serious instructional attention in both regular and special education classes. Students may respond to repeated failure with withdrawal of effort, anxiety, lowered self-esteem, and avoidance behaviors. In addition, significant math deficits can have serious

consequences on the management of everyday life as well as on job prospects and promotion opportunities.

Math learning problems range from mild to severe and manifest themselves in a variety of ways. Most common are difficulties with efficient recall of basic arithmetic facts and with reliability in written computation. When these problems are accompanied by a strong conceptual grasp of mathematical and spatial relations, it is important not to bog the student down by focusing only on remedial computation. While important in working with these students, such efforts should not deny a full math education to otherwise capable students.

Too frequently and too readily, individuals with dyslexia who have difficulty with mathematics are misdiagnosed as having dyscalculia - literally trouble with calculating, a neurologically based disability (Wright, 1996). True dyscalculia is rare. We know that for individuals with dyslexia, learning mathematical concepts and vocabulary, as well as the ability to use mathematical symbols, can be impeded by problems similar to those that interfere with the acquisition of written language. Additionally, we know that the learning of mathematical concepts, more than learning in any other content area, is tied closely to the teacher's or academic therapist's knowledge of mathematics and to the manner in which these concepts are taught. Therefore, there are individuals with dyslexia who will exhibit problems in mathematics, not because of their dyslexia or dyscalculia, but because their instructors are inadequately prepared in mathematical principles and/or in how to teach them.

Language disabilities, even subtle ones, can interfere with math learning. In particular, many LD
