**principles** Hugh DOHERTY (Miscellaneous Writer.), 1841  
**An introduction to English grammar, on universal**  
*Other Times, Other Realities* Arnold H. Modell, 1990  
Nearly a century has passed since Freud's theories unleashed a revolution in our understanding of the human psyche. Yet as Arnold Modell firmly points out, we still do not possess a theory that explains how psychoanalysis works. *Other Times, Other Realities* provides brilliant insight into this perplexing problem and lays the foundation for a comprehensive theory of psychoanalytic treatment. Modell's careful consideration of Freudian theory, the interpretations of contemporary ego psychology, and the contribution of object theory discloses the changing significance of the fundamental elements of the therapeutic process. In *Other Times, Other Realities*, readers will discover an illuminating synthesis of concepts underlying the various interpretations of the psychoanalytic process.

**Television Aesthetics** Nikos Metallinos, 2013-11-05  
USE FIRST TWO PARAGRAPHS ONLY FOR GENERAL CATALOGS  
This volume offers a response to three ongoing needs: to develop the main composition principles pertinent to the visual communication medium of television; to establish the field of television aesthetics as an extension of the broader field of visual literacy; and to promote television aesthetics to both students and consumers of television. Based on effective empirical research from three axes—perception, cognition, and composition—the aesthetic principles of television images presented are drawn from converging research in academic disciplines such as psychology, perceptual, cognitive, and experimental neurophysiology, and the fine arts: painting, photography, film, theater, music, and more. Although the aesthetics of the fine arts were traditionally built on contextual theories that relied heavily on subjective evaluation, on critical analyses, and on descriptive research methods, the aesthetics of today's visual communication media consider equally valuable empirical methodologies found in all sciences. Investigations in these different academic disciplines have provided the constructs and strengthened the foundations of the theory of television aesthetics offered in this book. Special features include a great variety of pictures supporting the topics discussed; a thorough, up-to-date and specifically related bibliography for each of the major parts of the book; computer drawings illustrating the concepts examined in the text; scientific data tables and charts documenting the research findings cited; simplified explanations of the processes of visual, auditory, and motion perceptions of images enhanced by specific diagrams; detailed analyses of the threefold process of stimulation, perception, and recognition of televised images; and workable, easy-to-understand and use rules of picture composition, visual image evaluations, and television program appreciation.
