

Time Variant or Time Invariant Systems

Definition:

A system is said to be Time Invariant if its input output characteristics do not change with time. Otherwise it is said to be Time Variant system.

Explanation:

Let us consider $x(n)$ be the input to the system which produces output $y(n)$ as shown in figure below.

Now delay input by k samples, it means our new input will become $x(n-k)$. Now apply this delayed input $x(n-k)$ to the same system as shown in figure below.
