Spectral Snow:

Spectral Snow Jack Snow,1996 *Red and Near-infrared Spectral Reflectance of Snow* H. W. O'Brien,R. H. Munis,Richard H. Munis,1975 The spectral reflectance of snow in the range of 0.60 to 2.50 micrometers wavelengths was studied in a cold laboratory using natural snow and simulated preparations of snow A white barium sulfate powder was used as the standard for comparison The high reflectance usually nearly 100% of fresh natural snow in the visible wavelength declines rapidly at wavelengths near and beyond 0.80 micrometers as the spectral absorption coefficients of ice increase The rate of decline of near infrared reflectance due to aging is strongly affected by the history of the snow during aging Snow aged under certain conditions may retain 90% or so of its reflectance in the visible red yet may be only about 10% as reflective as the original fresh snow beyond 2.2 micrometers Several environmental factors such as ambient temperature and wind effects which contribute to the variability in snow reflectance are discussed Hyperspectral Remote Sensing Ruiliang Pu,2017-08-16 Advanced imaging spectral technology and hyperspectral analysis techniques for multiple applications are the key features of the book This book will present in one volume complete solutions from concepts fundamentals and methods of acquisition of hyperspectral data to analyses and applications of the data in a very coherent manner It will help readers to fully understand basic theories of HRS how to utilize various field spectrometers and bioinstruments the importance of radiometric correction and atmospheric correction the use of analysis tools and software and determine what to do with HRS technology and data Remote Sensing and Hydrology 2000 Manfred Owe,2001 Radiative Transfer in Coupled Environmental Systems Knut Stamnes,Jakob J. Stamnes,2016-03-18 Radiative Transfer in Coupled Environmental Systems This book discusses radiative transfer in coupled media such as atmosphere ocean systems with Lambertian as well non Lambertian reflecting surfaces at the lower boundary The spectral range from the ultraviolet to the microwave region of the electromagnetic spectrum is considered and multi spectral as well as hyperspectral remote sensing is discussed Solutions of the forward problem for unpolarized and polarized radiation are discussed in considerable detail but what makes this book unique is that formulations and solutions of the inverse problem related to such coupled media are covered in a comprehensive and systematic manner This book teaches the reader how to formulate and solve forward and inverse problems related to coupled media and gives examples of how to solve concrete problems in environmental remote sensing of coupled atmosphere surface systems From the contents Inherent Optical Properties IOPs Basic Radiative Transfer Theory Forward Radiative Transfer Modeling The Inverse Problem Applications **Light Scattering Reviews 7** Alexander A. Kokhanovsky,2012-08-23 Light Scattering Reviews vol 7 is aimed at the description of modern advances in radiative transfer and light scattering The following topics will be considered the general purpose discrete ordinate algorithm DISORT for radiative transfer fast radiative transfer techniques use of polarization in remote sensing Markovian approach for radiative transfer in cloudy atmospheres coherent and incoherent backscattering by turbid media and surfaces advances in radiative

transfer methods as used for luminiscence tomography optical properties of aerosol ice crystals snow and oceanic water This volume will be a valuable addition to already published volumes 1 6 of Light Scattering Reviews
