Microbiomes of the Built Environment National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Division on Engineering and Physical Sciences, Health and Medicine Division, Division on Earth and Life Studies, Board on Infrastructure and the Constructed Environment, Board on Environmental Studies and Toxicology, Board on Life Sciences, Committee on Microbiomes of the Built Environment: From Research to Application, 2017-10-06 People's desire to understand the environments in which they live is a natural one People spend most of their time in spaces and structures designed built and managed by humans and it is estimated that people in developed countries now spend 90 percent of their lives indoors As people move from homes to workplaces traveling in cars and on transit systems microorganisms are continually with and around them The human associated microbes that are shed along with the human behaviors that affect their transport and removal make significant contributions to the diversity of the indoor microbiome The characteristics of healthy indoor environments cannot yet be defined nor do microbial clinical and building researchers yet understand how to modify features of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease The factors that affect the environments within buildings the ways in which building characteristics influence the composition and function of indoor microbial communities and the ways in which these microbial communities relate to human health and well being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology chemistry building science and human physiology This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments indoor microbiomes and effects on human health and well being It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions

Education for the Built Environment Rudolph Edward Rode, 1980

Wealth and the Built Environment Emilio José García, Brenda Vale, 2025-04-26 The need to address global environmental problems is urgent The United Nations 17 Sustainable Development Goals SDGs cover a wide range of global concerns from poverty hunger and gender equity to justice and climate action Concerningly the SDGs still have faith in economic growth and technological innovation as the means of fixing all global concerns including climate change What is

not questioned is whether solving development and sustainability problems through economic growth for the accumulation of wealth for the few has led to many of the current unequal development and environmental problems. If unfair growth and wealth accumulation have been part of the problem, how can they be part of the solution? The problem with the SDGs is that their fulfilment relies on wealth creation without the fundamental concomitant of wealth redistribution. The one common driver of change affecting both sustainability and development that has not been included in the SDGs is wealth, the central focus of this book. SDG 11, sustainable cities and communities, presents a further paradox unless the issue of wealth and its fair distribution is grasped. Cities are the places where wealth is generated but are also places where only a minority are wealthy. The wealth generated in cities leads to higher consumption of resources, higher emissions, and higher disparities and inequalities. However, any version of a sustainable future will happen in the built environment made according to current ideals like the present belief in overcoming all humanity's problems by becoming wealthier. A fundamental assumption of this book is that the first step toward a fairer habitat that can be maintained with the resources available is only possible if we stop designing cities and buildings as if everyone were wealthy or had to become wealthy. To achieve this goal, it is essential to identify and raise awareness of the impact of wealth, to question how the myths about the advantages of wealth were built, where they come from, what shape they take in the built environment, and who benefits from them.

Skills for engineering and built environment students John Davies, 2017-09-16. There are a lot of important skills needed for a career in engineering. As well as academic skills, future engineers need to be able to present data, work in project teams, carry out experiments, problem solve, and write reports. This book emphasises the importance of these core skills and supports engineering students as they successfully navigate their courses and move forward into a career of ongoing development. Written in a friendly and encouraging style, Skills for engineering and built environment students provides guidance on both the study and the professional practice of engineering. It addresses common worries and pitfalls, debunking myths and demystifying jargon. It helps with milestones such as group projects, presentations, work placements, and job interviews. Supported by interviews with students, lecturers, young engineers, and employers, Skills for Engineering and Built Environment Students guides students and early career professionals through an important transition stage, thoroughly preparing them for the world of work.

Emerging Technologies to

Promote and Evaluate Physical Activity Dan J Graham, James Aaron Hipp, Simon Marshall, Jacqueline Kerr, 2014-10-23

Increasingly efforts to promote and measure physical activity are achieving greater precision greater ease of use and or greater scope by incorporating emerging technologies This is significant for physical activity promotion because more precise measurement will allow investigators to better understand where when and how physical activity is and is not occurring thus enabling more effective targeting of particular behavior settings Emerging technologies associated with the measurement and evaluation of physical activity are noteworthy because

- 1 Their ease of use and transferability can greatly increase external validity of measures and findings
- 2 Technologies can significantly increase the ability to analyze patterns
- 3 They can improve the ongoing systematic collection and analysis of public health surveillance due to real time capabilities associated with many emerging technologies
- 4 There is a need for research and papers about the cyberinfrastructure required to cope with big data multiple streams processing aggregation visualization etc and
- 5 Increasingly blurred boundaries between measurement and intervention activity e g the quantified self self tracking movement may necessitate a reevaluation of the conventional scientific model for designing and evaluating these sorts of studies

There have been many recent disparate advances related to this topic Advances such as crowdsourcing allow for input from large diverse audiences that can help to identify and improve infrastructure for activity e g large group identification of environmental features that are conducive or inhibiting to physical activity on a national and even global scale Technologies such as Global Positioning Systems GPS and accelerometry are now available in many mobile phones and can be used for identifying and promoting activity and also understanding naturalistically occurring activity SenseCam and other personal visual devices and mobile apps provide person point of view context to physical activity lifestyle and timing Further multiple sensor systems are enabling better identification of types of activities like stair climbing and jumping that could not previously be identified readily using objective measures like pedometers or accelerometers in isolation The ability of activity sensors to send data to remote servers allows for the incorporation of online technology e g employing an online social network as a source of inspiration or accountability to achieve physical activity goals and websites such as Stickk com enable individuals to make public contracts visible to other users and also incorporates financial incentives and disincentives in order to promote behaviors including physical activity In addition the increasing use of active gaming e g Wii XBox Kinect in homes schools and other venues further underscores the growing link between technology and physical activity Improvements in mathematical models and computer algorithms also allow greater capacity for classifying and evaluating physical activity improving consistency across research studies Emerging technologies in the promotion and evaluation of physical activity is a significant area of interest because of its ability to greatly increase the amount and quality of global recorded measurements of PA patterns and its potential to more effectively promote PA Emerging technologies related to physical activity build on our own and others interdisciplinary collaborations in employing technology to address public health

challenges This research area is innovative in that it uses emerging resources including social media crowdsourcing and online gaming to better understand patterns of physical activity The physical environment and health: Implications for the planning and management of healthy cities Linchuan Yang, Bao-Jie He, Long Cheng, Yibin Ao, Ruoyu Wang, 2023-08-30
