be improved *IBM Intelligent Operations Center for Smarter Cities Administration Guide* Bhowmick Arundhati, Eduardo Francellino, Luis Glehn, Robert Lored, Pam Nesbitt, Shi Wei Yu, Sunil Mishr, IBM Redbooks, 2012-11-30 IBM defines a smarter city as one that makes optimal use of all available information to better understand and control its operations and optimize the use of resources There is much information available from different sources However city officials often lack the holistic view of the city s operations that is required to respond to the citizens needs in a timely manner and use the city resources wisely IBM Intelligent Operations Center delivers a unified view of city agencies providing three primary elements for successful management of cities use information anticipate problems and coordinate actions and resources Chapter 1 of this IBM Redbooks publication introduces the IBM Intelligent Operations Center solution The chapter provides a high level overview of its features benefits and architecture This information is intended for city officials and IT architects that must understand the business value of IBM Intelligent Operations Center and its architecture The remaining chapters of this book focus on information that help IBM Intelligent Operations Center administrators perform daily administration tasks This book describes commands and tools that IBM Intelligent Operations Center administrators must use to keep the solution running troubleshoot and diagnose problems and perform preventive maintenance This book includes preferred practices tips and techniques and general suggestions for administrators of IBM Intelligent Operations Center on premises deployments For related information about this topic refer to the following IBM Redbooks publications IBM Intelligent Operations Center for Smarter Cities Redpaper REDP 4939 IBM Intelligent Operations Center for Smarter Cities Solution Guide **Performance Tuning for IBM Security Directory Server** Annemarie Fitterer, Dave Bachmann, David Butler, Ben Matteson, Ramamohan T. Reddy, Sujay Shinde, Rick Smith, IBM Redbooks, 2014-04-02 In today s highly connected world directory servers are the IT cornerstone of many businesses These components of the corporate infrastructure are the foundation of authentication systems for internal and more commonly external user populations Managing a directory server with several hundred internal users is not all that difficult However managing a directory server with several million external users in all 24 time zones throughout the world is a much more daunting task IBM Security Directory Server software can handle millions of entries given the right architecture configuration and performance tuning However that tuning can differ greatly from tuning for a smaller server with only a few hundred thousand entries Managing and tuning a directory server of this size requires a change in mindset Tuning and performance must be a focus even before the hardware is ordered A proactive approach must be taken after installation also including the pretuning steps to better interface with other products to make installations and migrations successful and then regular maintenance to keep the directory running smoothly This IBM Redbooks publication is the accumulation of lessons learned in many different real world environments including a 24 server fault tolerant configuration with more than 300 million entries The authors pooled their knowledge and resources to provide the most comprehensive performance view possible from hardware to software sort heaps to buffer pools and table cardinalities In

large directory server deployments use this document as a guide for how to get the right fit for your environment **DB2 9 for z/OS: Packages Revisited** Paolo Bruni, Sean A. Dunn, Howard Hirsch, Norihiko Nakajima, Suresh Sane, IBM Redbooks, 2022-09-07 DB2 packages were introduced with DB2 V2.3 in 1993. During the 15 years that have elapsed a lot has changed. In particular there is a more widespread use of distributed computing, Java™ language, new tools, and upgrades in the platform software and hardware. The best practices back then just might not be optimal today. In this IBM Redbooks publication we take a fresh look at bringing packages into the 21st century. We begin with an overview of packages and explain the advantages of using packages. Because database request module (DBRM) based plans have been deprecated in DB2 9 you need to convert to packages if you did not use packages already. We provide guidance on using a DB2 provided function to convert from DBRM based plans to packages. We re-examine the application development frameworks for packages, program preparation, package setup, and execution. For distributed applications we include a discussion of a utility to identify and remove deprecated private protocol and converting to DRDA, as well as an introduction to the new pureQuery function of Data Studio. We also discuss common problems and their resolutions. We then explore administration and operational activities dealing with packages including security, access path management, where we discuss the newly introduced package stability feature to allow for a seamless fallback, and management and performance aspects. The appendixes include useful queries and mention tools for managing packages effectively. **IBM FileNet P8 Platform and Architecture** Wei-Dong Zhu, Nicholas Buchanan, Michael Oland, Thorsten Poggensee, Pablo E. Romero, Chuck Snow, Margaret Worel, IBM Redbooks, 2011-04-21 IBM FileNet Platform is a next generation unified enterprise foundation for the integrated IBM FileNet P8 products. It combines the enterprise content management with comprehensive business process management and compliance capabilities. IBM FileNet P8 addresses the most demanding compliance content and process management needs for your entire organization. It is a key element in creating an agile, adaptable enterprise content management (ECM) environment necessary to support a dynamic organization that must respond quickly to change. In this IBM Redbooks publication we provide an overview of IBM FileNet P8 and describe the core component architecture. We also introduce major expansion products that extend IBM FileNet P8 functionality in the areas of content ingestion, content accessing through connectors and federation, the application framework, and discovery and compliance. In this book we discuss the anatomy of an ECM infrastructure, content event processing, content life cycle, and business processes. This book gives IT architects, IT specialists, and IT Technical Sales a solid understanding of IBM FileNet P8 Platform, its architecture, its functions, and extensibility, and its unlimited capabilities. **F&S Index United States Annual**, 1999 [Using zEnterprise for Smart Analytics: Volume 2 Implementation](#) Mike Ebbers, Alex Louwe Kooijmans, Colin Page, Patrick Hempeler, Qiong Liu, LK Swift, Lih Wang, IBM Redbooks, 2013-04-23 This IBM Redbooks publication series explains the assessment and implementation of a workload integrated within IBM Smarter Banking Showcase and hosted at IBM Montpellier, France.
