The Biological Basis of Human Nature Herbert Spencer Jennings, 1930 Preface This volume is an attempt to present those aspects of modern experimental biology that are of most interest in considering the problem of human personality and society It deals with the origin development and nature of the traits which distinguish individuals and which in man make up character and with some of the relations of these matters to social questions The material is drawn mainly from the relatively new sciences of Genetics and Experimental Embryology An effort is made to present it in non technical language though for a few important things unknown to common speech the technical terms are the only ones

available The first five chapters summarize the biological foundations for the matters dealt with later They are necessarily more technical than the others they are compelled to present certain points that have not yet become familiar but which in time will be a part of the every day knowledge of all educated persons Understanding of the more general questions dealt with in later chapters depends absolutely on a grasp of the matters presented in these chapters Chapters six to eight deal with the relations of this fundamental knowledge to certain more problematical questions of life and mind chapter eight presenting certain historical aspects of these matters Chapters nine to twelve inclusive take up the application of this knowledge to some social problems Chapter thirteen stands by itself it is speculative The three final chapters are devoted to aspects of the problem of evolutionary change References to sources and other comments are gathered into notes at the end of each chapter They are designed merely as keys by which the reader may follow further any subjects which interest him The books or papers referred to will usually be found to contain titles of other works along the same line through which the entire field of knowledge may be explored For permission to make use of material previously published in the form of articles or addresses the author is indebted to the Forum Plain Talk Science and the Survey Graphic He is indebted for important aid in the preparation of the volume to Louis B Jennings Ruth Stocking Lynch and Harold Heath Baltimore January 4 1930

Thomas Walker, 1919 **The faculty of adaptability : humour's contribution to human ingenuity** Alastair Clarke, 2009-12-17 The definitive text on the pattern recognition theory of humour When our species turns inward to analyze itself the two facets of ingenuity and humour are often held in high regard as examples of its unique abilities and this theory suggests they are more closely connected than has previously been imagined or acknowledged While adaptability is a necessary facet of biological evolution its expression in human beings has become accelerated into an intellectual capacity for inventing non genetic solutions to environmental challenges producing a versatility and ingenuity that have come to define the species How does this ability function then and what has led to its unparalleled exaggeration in the human race According to pattern recognition theory this abundant resourcefulness has arisen due to the presence of a simple hardwired faculty that exists precisely to encourage it operating via the recognition of interesting patterns This suggests the author is known as humour One of two contrasting theories of humour by Clarke The Faculty of Adaptability interprets amusement as a creative adaptive system encouraging the invention and discovery of new information and original ideas Following a detailed description of a schematic model via which such a system could exist the book proceeds to suggest a timeframe for the evolution of the faculty before addressing the basis for over 100 common stimuli to humour The Evidences of Catholicity Martin John Spalding, 1875 **Harper's Encyclopædia of United States History from 458 A.D. to 1905** Benson John Lossing, 1905 **Harpers' Encyclopædia of United States from 458 A.
