Transport Projects Programmes And Policies:

Transport Projects, Programmes and Policies John Nellthorp, Peter Mackie, 2017-11-30 This title was first published in 2003 The European Union is constantly struggling to find effective ways to plan major transport infrastructure developments at a European level This is a critical factor in the emerging debates surrounding the absorption of the accession states into the EU but it is essential for these states that their economic competitiveness is supported by appropriate and effective transport infrastructure It is therefore crucial to find innovative approaches to the infrastructure itself how it is financed and the ways in which proper evaluation procedures are implemented to select which policies programmes and projects should be supported This informative volume brings together leading international specialists in economic evaluation applied within the transport sector Their contributions encompass all the main levels at which transport planning is typically conceptualized strategic regional policy programme and project planning It therefore examines how coherent economic evaluation practice can be developed and applied not only across different physical scales but also across national borders

Project and Policy Evaluation in Transport Liana Giorgi, A. D. Pearman, 2002 There is a multitude of assessment methods available for analyzing and reporting on the impacts of policies all with different underlying assumptions and criteria This volume draws up a specific set of guidelines for the field of transport bringing together a multidisciplinary team of analysts from throughout the EU to discuss the various assessment methods and how they can best be used to evaluate transport programmes and systems

Project and Policy Evaluation in Transport Liana Giorgi, Alan Pearman, Annuradha Tandon, Dimitrios Tsamboulas, 2017-11-22 This title was first published in 2002 There is a multitude of assessment methods available for analyzing and reporting on the impacts of policies all with different underlying assumptions and a wide range of criteria Since the 1950s much research has gone into creating guidelines for policy analysis yet only a small percentage of evaluation has been carried out on transport policy and none by political scientists or social policy specialists The editors of this volume recognize that European integration has seen a drive to bring policy evaluation on to the transport agenda and has increased demands for strategic assessments It has become apparent that to gain a fuller understanding of the success of a transport programme a much more complex combination of analytical methods must be used and a set of guidelines specifically for the field of transport must be developed This book achieves this by bringing together a multidisciplinary team of analysts from throughout the EU to discuss in a much broader way the various types of assessment methods and how they can best be used to evaluate transport programmes and systems both individually and in combination
