Using Computers In Archaeology:

  Using Computers in Archaeology Gary Lock,2003-12-08 This is the first comprehensive review of computer applications in archaeology from the archaeologist s perspective The book deals with all aspects of the discipline from survey and excavation to museums and education   *Using Computers in Archaeology* Shannon P. McPherron,Harold Lewis Dibble,2002 Publisher Description   *Mathematics and Computers in Archaeology* J. E. Doran,F. R. Hodson,1975 This book is for students and practitioners of archaeology It offers an introductory survey of all the applications of mathematical and statistical techniques to their work These applications are increasingly concerned with computerized data classification and quantification and their effect is to reduce the level of uncertainty in the interpretation of the evidence that time and chance have left Any archaeologist wanting to find out what these new methods have to offer has hitherto been forced to search for information in the specialist handbooks conference proceedings and review articles of his own and very often of other disciplines This book brings the information conveniently together so far as it pertains to archaeology and permits an assessment of its relevance and quality Those who have been daunted by the specialist knowledge apparently demanded will now be able to acquire a thorough grasp of principles and practices Only an elementary knowledge of mathematics is presumed throughout Part 1 provides a brief introduction to basic concepts in archaeology and mathematics Part 2 relates the standard archaeological techniques and procedures to mathematics it concentrates on numerical approaches best suited to archaeological practices Part 3 examines various automatic seriation techniques and discusses further work that is coming to play an essential part in the development of archaeology   **Archaeological Method and Theory** Linda Ellis,2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often and inconveniently treated in separate publications It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials Thus the reader will find entries on subject matter covering disciplinary theory legislation affecting the work of archaeologists pre excavation surveying excavation methodology on site conservation techniques post excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources Here the latest refinements in techniques such as radiometric dating stable isotopic analysis and the PCR technique of DNA analysis are presented clearly and authoritatively The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodologi enhancements provided by the physical and natural sciences Cultural property legislation regardless of its country of origin has affected how archaeologists conduct their work This encyclopedia covers all major U S legislation developed for the protection of cultural property including the recent Native American Graves Protection and Repatriation Act and offers a substantial article on worldwide legislation concerning the

reburial of human remains and its effects on the present and future practice of archaeology Without some sort of conservation program at the point of excavation valuable materials may be inadvertently contaminated or destroyed Many simple and low cost techniques to promote both sample integrity and long term preservation for major classes of materials are described in this volume Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology Industrial Archaeology Medieval Archaeology and Classical Archaeology
