Grape Rootstocks and Related Species Alireza Rahemi, Jean C. Dodson Peterson, Karl True Lund, 2022-06-02 This book covers about 20 grape species that are vitally important in breeding programs and provide information on approximately 150 of the most familiar grape rootstocks in the world Today grape rootstocks play a fundamental role in resistance to biotic and abiotic stresses and adaptation of grapevine to different environmental conditions a factor that has opened commercial grape growing up to regions that might otherwise be overlooked Grape rootstocks can be used for adaptation to a variety of soil conditions including soil texture depth nutrient availability pH salinity lime content water availability drought and water drainage Rootstocks can also be used to shift scion cultivar the timing of various key phenological events and indirectly affects vineyard design There are around 1500 grape rootstocks developed in the world of which around 50 are commonly used as commercial rootstock North American species account for around 30 species and two third of them have already been used for rootstock breeding at one time or another However the most commonly available rootstocks are derived from just three American species *V berlandieri* *V rupestris* and *V riparia* Therefore the most common grape rootstocks have a narrow genetic base and efforts to extend the gene pools for breeding programs by using the other species are of ongoing importance to the industry and scientific community
