negatively towards your body or feed habits and you're over 50 then keep reading. It is essential for women as they approach middle age to start exercising necessary precautions with their health. This is the time where women become at risk for contracting diseases like type 2 diabetes, heart disease, cancer, and high blood pressure to name a few. From this age, women need to pay considerable attention to what and how they eat. Healthy eating habits lower the risk of illness, reduce middle age spread, and slow down the signs of aging. As a person ages, they undergo certain phases of life where changes take place. We go from infant to toddler, we suffer puberty, adolescent years, become a young adult, and so on. Each decade implements some change in body and character as we learn, grow, and mature. Suddenly, before you realize it, you have hit your fifties and start to notice some things decline. Grey streaks sliver the hair, the skin is not as tight, and parts of the body are not as perky as they used to be. Fat forms and stubbornly will not move, especially around the belly area. Belly fat is a health concern and needs to be addressed. Once a woman is over the age of fifty, it gets exceedingly difficult to be rid of any fat, not only that around the belly. Intermittent fasting has been known to help get rid of stubborn fat. It may also slow down signs of aging, it may increase longevity, and reduce the risk of disease in middle-aged women. It helps to kick start the metabolism, increase energy, and vitality along with one's self-esteem.
