## Some Improperly Posed Problems Of Mathematical Physics:

**Some Improperly Posed Problems of Mathematical Physics** Michail M. Lavrentiev, 2013-03-13 This monograph deals with the problems of mathematical physics which are improperly posed in the sense of Hadamard The first part covers various approaches to the formulation of improperly posed problems These approaches are illustrated by the example of the classical improperly posed Cauchy problem for the Laplace equation The second part deals with a number of problems of analytic continuations of analytic and harmonic functions The third part is concerned with the investigation of the so called inverse problems for differential equations in which it is required to determine a differential equation from a certain family of its solutions Novosibirsk June 1967 M M LAVRENTIEV Table of Contents Chapter I Formulation of some Improperly Posed Problems of Mathematical Physics 1 Improperly Posed Problems in Metric Spaces 2 A Probability Approach to Improperly Posed Problems 8 Chapter II Analytic Continuation 1 Analytic Continuation of a Function of One Complex Variable from a Part of the Boundary of the Region of Regularity 13 2 The Cauchy Problem for the Laplace Equation 18 3 Determination of an Analytic Function from its Values on a Set Inside the Domain of Regularity 22 4 Analytic Continuation of a Function of Two Real Variables 32 5 Analytic Continuation of Harmonic Functions from a Circle 38 6 Analytic Continuation of Harmonic Function with Cylindrical Symmetry 42 Chapter III Inverse Problems for Differential Equations 1 The Inverse Problem for a Newtonian Potential

Morozov, 2011-10-23 Some problems of mathematical physics and analysis can be formulated as the problem of solving the equation  $f = A u$  where  $A$  is an operator with a non empty domain of definition  $D$  in a metric space  $U$  with range in a metric space  $F$  The metrics  $A$  on  $U$  and  $F$  will be denoted by  $P$  and  $P$  respectively Relative to  $u \in F$  to the twin spaces  $U$  and  $F$  J Hadamard P 06 gave the following definition of correctness the problem 1 is said to be well posed correct properly posed if the following conditions are satisfied 1 The range of the value  $Q$  of the operator  $A$  coincides with  $A F$  solvability condition 2 The equality  $A u = A v$  for any  $u, v \in D A$  implies the equality  $u = v$  uniqueness condition 3 The inverse operator  $A^{-1}$  is continuous on  $F$  stability condition Any reasonable mathematical formulation of a physical problem requires that conditions 1-3 be satisfied That is why Hadamard postulated that any ill posed improperly posed problem that is to say one which does not satisfy conditions 1-3 is non physical Hadamard also gave the now classical example of an ill posed problem namely the Cauchy problem for the Laplace equation **Some improperly posed problems of mathematical**

**Physics** Michail Michajlovič Lavrent'ev, 1967      **Methods for Solving Incorrectly Posed Problems** V.A.

Morozov, 1984-11-20 Some problems of mathematical physics and analysis can be formulated as the problem of solving the equation  $Au = f$  where  $A: D \rightarrow F$  is an operator with a non empty domain of definition  $D$  in a metric space  $U$  with range in a metric space  $F$ . The metrics  $A$  on  $U$  and  $F$  will be denoted by  $P$  and  $P$  respectively. Relative to the twin spaces  $U$  and  $F$  Hadamard [6] gave the following definition of correctness: the problem  $1$  is said to be well posed (correctly posed) if the following conditions are satisfied:  $1$  The range of the value  $Q$  of the operator  $A$  coincides with  $A^{-1}Q$  (solvability condition);  $2$  The equality  $Au = Au$  for any  $u \in D$  implies the  $L^2$  equality  $u = u$  (uniqueness condition);  $3$  The inverse operator  $A^{-1}$  is continuous on  $F$  (stability condition). Any reasonable mathematical formulation of a physical problem requires that conditions  $1-3$  be satisfied. That is why Hadamard postulated that any ill-posed (improperly posed) problem (that is to say one which does not satisfy conditions  $1-3$ ) is non-physical. Hadamard also gave the now classical example of an ill-posed problem, namely the Cauchy problem for the Laplace equation.

Introduction to Inverse Problems for Differential Equations Alemdar Hasanov, Vladimir G. Romanov, 2021-08-02 This book presents a systematic exposition of the main ideas and methods in treating inverse problems for PDEs arising in basic mathematical models, though it makes no claim to being exhaustive. Mathematical models of most physical phenomena are governed by initial and boundary value problems for PDEs and inverse problems governed by these equations arise naturally in nearly all branches of science and engineering. The book's content, especially in the Introduction and Part I, is self-contained and is intended to also be accessible for beginning graduate students whose mathematical background includes only basic courses in advanced calculus, PDEs, and functional analysis. Further, the book can be used as the backbone for a lecture course on inverse and ill-posed problems for partial differential equations. In turn, the second part of the book consists of six nearly independent chapters. The choice of these chapters was motivated by the fact that the inverse coefficient and source problems considered here are based on the basic and commonly used mathematical models governed by PDEs. These chapters describe not only these inverse problems but also main inversion methods and techniques. Since the most distinctive features of any inverse problems related to PDEs are hidden in the properties of the corresponding solutions to direct problems, special attention is paid to the investigation of these properties. For the second edition, the authors have added two new chapters focusing on real-world applications of inverse problems arising in wave and vibration phenomena. They have also revised the whole text of the first edition.

Improperly Posed Problems in Partial Differential Equations L. E. Payne, 1975-01-01 Improperly posed Cauchy problems are the primary topics in this discussion, which assumes that the geometry and coefficients of the equations are known precisely. Appropriate references are made to other classes of improperly posed problems. The contents include straight-forward examples of methods: eigenfunction, quasireversibility, logarithmic convexity, Lagrange identity, and weighted energy used in treating improperly posed Cauchy problems. The Cauchy problem for a class of second-order operator equations is examined, as is the

question of determining explicit stability inequalities for solving the Cauchy problem for elliptic equations Among other things an example with improperly posed perturbed and unperturbed problems is discussed and concavity methods are used to investigate finite escape time for classes of operator equations

**Encyclopaedia of Mathematics** Michiel Hazewinkel,2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathe matics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivi sion has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other

domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques *Actes du congrès international des mathématiciens, 1970 ,1971*
