The Analytic

Hierarchy Process in Natural Resource and Environmental Decision Making Daniel Schmoldt, Jyrki Kangas, Guillermo A. Mendoza, Mauno Pesonen, 2013-11-11 Decision making in land management involves preferential selection among competing alternatives. Often such choices are difficult owing to the complexity of the decision context. Because the analytic hierarchy process (AHP) developed by Thomas Saaty in the 1970s has been successfully applied to many complex planning, resource allocation, and priority setting problems in business, energy, health, marketing, natural resources, and transportation, more applications of the AHP in natural resources and environmental sciences are appearing regularly. This realization has prompted the authors to collect some of the important works in this area and present them as a single volume for managers and scholars. Because land management contains a somewhat unique set of features not found in other AHP application areas such as site-specific decisions, group participation and collaboration, and incomplete scientific knowledge, this text fills a void in the literature on management science and decision analysis for forest resources.

Deep Consulting: Engineering Intelligent Solutions from Data to Decision PALLAV KUMAR KAULWAR, Research Methods Edward P. Sarafino, 2005. This thorough and up-to-date book presents the concepts and procedures in conducting research in a way that enables readers to easily understand, integrate, and apply them, and incorporates the use of technology very extensively and effectively. A how-to perspective features well-written descriptions and clear examples that show learners how to perform the activities involved in designing research, collecting and analyzing data, and preparing a report. The book also contains classic and modern research on various topics published over the last few decades, demonstrating the substantial generality and uniformity of fundamental research concepts and strategies across time and fields in psychology. For individuals seeking to acquire cognitive skills that will benefit them in non-research careers and in daily judgments and thought processes.
