Statistical Analysis Of Observations Of Increasing Dimension:

Statistical Analysis of Observations of Increasing Dimension V.L. Girko, 2013-03-09 Statistical Analysis of Observations of Increasing Dimension is devoted to the investigation of the limit distribution of the empirical generalized variance covariance matrices their eigenvalues and solutions of the system of linear algebraic equations with random coefficients which are an important function of observations in multidimensional statistical analysis A general statistical analysis is developed in which observed random vectors may not have density and their components have an arbitrary dependence structure The methods of this theory have very important advantages in comparison with existing methods of statistical processing The results have applications in nuclear and statistical physics multivariate statistical analysis in the theory of the stability of solutions of stochastic differential equations in control theory of linear stochastic systems in linear stochastic programming in the theory of experiment planning

Robust Adaptive Beamforming Jian Li, Petre Stoica, 2005-10-10 The latest research and developments in robust adaptive beamforming Recent work has made great strides toward devising robust adaptive beamformers that vastly improve signal strength against background noise and directional interference This dynamic technology has diverse applications including radar sonar acoustics astronomy seismology communications and medical imaging There are also exciting emerging applications such as smart antennas for wireless communications handheld ultrasound imaging systems and directional hearing aids Robust Adaptive Beamforming compiles the theories and work of leading researchers investigating various approaches in one comprehensive volume Unlike previous efforts these pioneering studies are based on theories that use an uncertainty set of the array steering vector The researchers define their theories explain their methodologies and present their conclusions Methods presented include Coupling the standard Capon beamformers with a spherical or ellipsoidal uncertainty set of the array steering vector Diagonal loading for finite sample size beamforming Mean squared error beamforming for signal estimation Constant modulus beamforming Robust wideband beamforming using a steered adaptive beamformer to adapt the weight vector within a generalized sidelobe canceller formulation Robust Adaptive Beamforming provides a truly up to date resource and reference for engineers researchers and graduate students in this promising rapidly expanding field
