clearly describes and illustrates statistical procedures New to the second edition are chapters on John Tukey's exploratory data analysis including stem and leaf displays a new chapter on threats to internal and external validity a complete revamp of the measurement chapter to bring it up to date with the latest edition of the Standard for Educational and Psychological Testing and updated examples of research applications in every chapter Specific examples are drawn from the files of the Educational Resources Information Centers ERIC and a complete glossary of statistical terms as well as a new subject index are provided An excellent resource for both undergraduate and graduate students or anyone else desiring statistical comprehension
