Technology Program Digest United States. National Aeronautics and Space Administration, **Current Problems and Ways of Industry Development: Equipment and Technologies** Olga G. Shakirova, Oleg V. Bashkov, Akhmet A. Khusainov, 2021-04-28

This book is a reflection of the modern scientific view of current and future problems and prospects of industry development equipment and technologies. It combines the results of advanced researches of industry development equipment and technologies in the field of various sciences both technical and humanitarian, the synthesis of which allowed forming a holistic meta-scientific concept of industry development equipment and technologies. The book consists of two parts. The first part reflects technical problems and ways of industry development equipment and technologies. It examines the promising technologies for modern industrial development, the technogenic factors of neo-industrialization in the context of digital economy, strategic guidelines for the industry development equipment and technologies from the standpoint of sustainable development, as well as integration mechanisms for the industry development equipment and technologies and scientific support for their activation. In the second part, organizational and managerial problems and ways of industry development equipment and technologies are disclosed. The industry development equipment and technologies were studied from a view from the standpoint of economics and management, legal barriers to the industry development equipment and technologies, and the prospects for overcoming them, the impact of globalization on the industry development equipment and technologies, and recommendations for managing internationalization, as well as social issues of industry development equipment and technologies in the aspect of human resources training and management. The book combines the best works presented at the International Research and Practice Conference Actual Problems and Ways of Industry Development Equipment and Technologies, organized by the Komsomolsk on Amur State University and the Institute of Scientific Communications and held in Komsomolsk on Amur, Russia, September 28–October 1, 2020. The target audience of the book is academic scientists studying issues of industry development equipment and technologies, as well as industrial enterprises and government regulators of industry development equipment and technologies. **Research and Technology Program Digest Flash Index**, 1967

[Shock Wave Science and Technology Reference Library, Vol. 3](#) Yasuyuki Horie, 2008-09-18
This book is the second volume of Solids Volumes in the Shock Wave Science and Technology Reference Library. These volumes are primarily concerned with high pressure shock waves in solid media, including detonation and high velocity impact and penetration events. This volume contains four articles. The first two describe the reactive behavior of condensed phase explosives, and the remaining two discuss the inert mechanical response of solid materials. The articles are each self-contained and can be read independently of each other. They offer a timely reference for beginners as well as professional scientists and engineers covering the foundations and the latest progress, and include burgeoning development as well as challenging unsolved problems. The first chapter by S. Sheild and R. Engelke discusses the shock initiation and detonation phenomena of solids explosives. The article is an outgrowth of two previous review articles, Explosives in vol. 6 of Encyclopedia of Applied Physics.

VCH 1993 and Initiation and Propagation of Detonation in Condensed Phase High Explosives in High Pressure Shock Compression of Solids III Springer 1998 This article is not only a dated review but also offers a concise heuristic introduction to shock waves and condensed phase detonation The authors emphasize the point that detonation is not an uncontrollable chaotic event but that it is an orderly event that is governed by and is describable in terms of the conservation of mass momentum energy and certain material specific properties of the explosive
