Tectonic Controls and Signatures in Sedimentary Successions Lynne E. Frostick, 2009-04-13 Stratigraphers and sedimentologists who are presently describing and interpreting the infill of sedimentary basins are generally agreed that it is difficult to disentangle the signatures of tectonic processes from those of climate and eustatic sea level change in the resultant rock succession Until better criteria are developed to distinguish between the roles played by the major variables it is still most useful to document and interpret basin fill architectures where we know from independent evidence that one of the main controls is likely to have been a major contributor This book contains a collection of papers describing situations where the tectonic setting is fairly well established and it can be assumed that at least the tectonic factor has contributed to the resultant signatures

Postcollisional Tectonics and Magmatism in the Mediterranean Region and Asia Yildirim Dilek, Spyros Pavlides, 2006 The Mediterranean region and Asia provide a natural laboratory to investigate the driving forces of continental tectonics in an ongoing collisional orogen and the crustal and mantle response to various modes of deformation associated with plate boundary processes The multidisciplinary research efforts in this region over the last fifteen years have produced a wealth of new data to better understand the interplay and feedback mechanisms between crustal and mantle processes and the dynamic landscape evolution in a complexly deforming area A number of discrete collisional events between the Gondwana derived continental fragments i e Adria Pelagonia Arabia India and Eurasia controlled the geodynamics of the Mediterranean region and Asia during the late Mesozoic and Cenozoic This book is a collection of research papers presenting new data interpretations and syntheses on various aspects of the collision induced tectonic magmatic metamorphic and geomorphic processes that have affected the evolution of this orogenic belt It should help us better understand the mode and nature of tectonic and magmatic processes and crustal evolution in active collision zones and the distribution and causes of seismic and volcanic events and their impact on landscape evolution Publisher's website
